

# International Enexco Commences \$2.9 Million Drill Program on the Man Lake Uranium Project, Athabasca SK

27.01.2014 | [Marketwired](#)

- 13,000 Metre Diamond Drill Program Underway
- 3 Drill Rigs
- 18 Drill Holes
- Partnered with Cameco and AREVA

VANCOUVER, BRITISH COLUMBIA -- (Marketwired - Jan 27, 2014) - [International Enexco Ltd.](#) (TSX VENTURE:IEC) (OTCQX:IEXCF)(FRANKFURT:I6E) (the "Company" or "Enexco") is pleased to announce that the proposed 13,000 metre (42,650 feet) diamond drill program on the Mann Lake Uranium project has commenced under the direction of project operator, [Cameco Corp.](#) ("Cameco"). The budget for the 2014 program is CDN\$2,900,000 with Enexco's portion being CDN\$870,000.

The 2014 winter drill program will include up to 18 diamond drill holes evaluating three types of targets; a preliminary evaluation of the area footwall to the western axis of the C trend, the initial evaluation of the conductive features near the western margin of the Wollaston sedimentary corridor and the completion of the systematic evaluation of the remaining targets along the main C trend. The drill program will be carried out in coordination with Cameco's drill programs planned on adjacent projects.

The Mann Lake project is located in the heart of what is undisputedly the most prolific and highest grade uranium region in the world, the Athabasca Basin in Saskatchewan. Mann Lake is 25 km southwest of Cameco's McArthur River Mine and is 20 km northeast of Cameco's Millennium deposit. High-grade basement-hosted uranium mineralization was discovered at Mann Lake during a 2006 drill program. The two highest grade intervals are 7.12% U3O8 over 0.25m and 5.53% U3O8 over 0.4m at depths of just over 500m.

## Qualified Person
