

Rockhaven Resources Ltd. Plans 12,000 m of Diamond Drilling at Klaza Project, Yukon

20.03.2014 | [Marketwired](#)

VANCOUVER, BRITISH COLUMBIA--(Marketwired - Mar 20, 2014) - **Rockhaven Resources Ltd.** (TSX VENTURE:RK) ("Rockhaven") is pleased to announce that funding is in place for the 2014 exploration program at its 100% owned Klaza gold-silver property, located in the Dawson Range Gold Belt of southern Yukon. Drilling and trenching at the road-accessible Klaza property since 2010 have identified nine main mineralized structural zones and numerous subsidiary structures within an 2000 by 4000 m corridor. Individually, the main zones range from 1 to 75 m in width and are continuously mineralized over strike lengths of 250 to 2400 m. The zones have been traced over a cumulative strike length of 9400 m and all remain open for expansion along strike and to depth.

The proposed 2014 program will include 12,000 m of diamond drilling and will focus on delineating and expanding areas of high-grade gold and silver mineralization (>8.00 g/t gold EQ). 2014 drill targets will include:

- The Western BRX Zone, where 2013 trenching and limited broadly-spaced drilling have returned strong results over a 750 m strike length, including 68.27 g/t gold EQ (50.1 g/t gold and 910 g/t silver) over 3.25 m from trench TR-13-58 and 8.00 g/t gold EQ (5.78 g/t gold and 111 g/t silver) over 15.62 m from hole DH-12-96;
- The Western Klaza Zone, where trenching and drilling returned numerous gold and silver-rich intervals including 11.15 g/t gold EQ (4.51 g/t gold and 332 g/t silver) over 7.12 m from hole DH-12-115;
- The Central Klaza Zone beneath hole DH-12-133, the deepest intercept to date on the zone, which intersected 12.00 g/t gold EQ (11.90 g/t gold and 5.23 g/t silver) over 6.70 m at a depth of 310 m below surface; and,
- The Pearl Zone, a 2013 discovery where two excavator trenches situated 450 m apart averaged 29.04 g/t gold EQ (23.98 g/t gold and 254 g/t silver) over 1.22 m.

"We are very excited to build on the success and knowledge gained from recent programs at the Klaza property which have outlined multiple mineralized structures over long strike lengths," stated Matt Turner, CEO of Rockhaven Resources. "We are now in a position to focus on defining the higher-grade parts of these extensive systems, while advancing other blue-sky targets within this evolving gold district."

Maps and cross-sections related to the Klaza project can be viewed at the Company's website at www.rockhavenresources.com. Further details of the 2014 exploration program and targets follow below:

Western BRX Zone

The Western BRX Zone is the main target of 2014 diamond drilling. Infill and step-out excavator trenching in 2013 at the Western BRX Zone confirmed continuity of the mineralized structure and further delineated areas of high-grade gold and silver that were partially outlined by widely-spaced drill holes in 2011 and 2012. Highlight results are shown below:

Drill Hole/ Trench	From (m)	To (m)	Interval (m)*	Gold (g/t)	Silver (g/t)	Gold EQ (g/t)*
DH-11-37	81.13	95.93	14.80	5.43	50	6.43
DH-11-39	151.29	152.94	1.65	23.50	239	28.28
DH-12-72	178.48	179.81	1.33	10.60	23	11.06
DH-12-96	329.74	345.36	15.62	5.78	111	8.00
TR-13-47	30.05	31.20	1.15	87.0	768	102.36
TR-13-49	1.61	2.92	1.31	8.42	548	19.38
TR-13-58	3.35	6.60	3.25	50.1	910	68.27
TR-13-59	11.05	15.20	4.15	7.47	537	18.20

TR-13-67	35.00	38.55	3.55	31.38	310	37.59
TR-13-73	3.70	6.20	2.50	26.10	574	37.58
TR-13-74	12.45	14.70	2.25	31.20	1030	51.80
TR-13-75	4.75	6.20	1.45	11.50	1680	45.10
and	17.24	20.24	3.00	34.70	160	37.90
TR-13-77	5.08	7.18	2.10	14.40	729	28.98

+ Represents the diamond drill hole or trench sample length. True widths are estimated to be approximately 80-90% of the interval.

* Gold equivalence (EQ) has been calculated using metal prices of \$1300 per ounce gold and \$26.00 per ounce silver, to be consistent with earlier calculations and assumes 100% recoveries.

Central and Western Klaza Zones

The Central and Western Klaza Zones host discrete veins, breccias and sheeted veinlets that have been traced over a strike length of 1000 m and to a depth of 325 m down dip. Focused diamond drilling in 2014 will expand the area of known mineralization to the west and to depth where some of the best results have been returned to date. Highlight results from the Central and Western Klaza Zone include:

Drill Hole/ Trench	From (m)	To (m)	Interval (m)+	Gold (g/t)	Silver (g/t)	Gold EQ (g/t)*
DH-10-07	134.00	149.30	15.30	7.20	260	12.40
DH-11-16	88.04	94.82	6.78	6.09	101	8.11
DH-11-28	253.66	255.12	1.46	10.25	585	21.95
DH-12-79	91.56	94.77	3.21	3.18	516	13.50
DH-12-115	214.47	221.59	7.12	4.51	332	11.15
DH-12-133	439.00	445.70	6.70	11.90	5.23	12.00
TR-13-51	11.19	29.98	18.79	5.61	300	11.61
TR-13-52	3.75	10.59	6.84	16.20	158	19.36
TR-13-66	18.72	20.99	2.27	25.70	449	34.68
TR-13-69	5.16	9.76	4.60	8.29	295	14.20
TR-13-70	2.50	5.53	3.03	16.76	1052	37.80

+ Represents the diamond drill hole or trench sample length. True widths are estimated to be approximately 80-90% of the interval.

* Gold equivalence (EQ) has been calculated using metal prices of \$1300 per ounce gold and \$26.00 per ounce silver, to be consistent with earlier calculations and assumes 100% recoveries.

Pearl Zone

The Pearl Zone was discovered in 2013 and represents the most easterly, and if projected westward, the most northerly mineralized structure identified at the Klaza property. Two excavator trench exposures located 450 m apart returned 28.2 g/t gold and 359 g/t silver (35.38 g/t gold EQ) over 1.20 m and 19.75 g/t gold and 148 g/t silver (22.71 g/t gold EQ) over 1.25 m (see Rockhaven news release dated October 3, 2013). The results are particularly important as no mineralization was previously known in this area. Detailed follow-up drilling will be done in 2014 to evaluate this new high-grade gold and silver discovery, which is open to extension along strike in both directions.

Other Targets

A small proportion of the planned drilling will evaluate particularly encouraging areas in the other six known mineralized zones. In addition, some prospecting, geological mapping and geophysical surveying will be completed in other areas of the property to define additional targets for drilling or trenching. All of the mineralized zones discovered to date at Klaza are marked by linear magnetic lows with coincident soil geochemical anomalies. In areas surveyed, these magnetic lows coincide with distinct chargeability highs and resistivity lows. The focus will be on defining and, as warranted, drill testing similar anomalies elsewhere on the property, with particular emphasis on overburden covered areas to the west of the Western BRX and Western Klaza Zones. In conjunction with 2014 work, ongoing baseline environmental surveys and geotechnical data collection will continue to advance the Klaza property toward the permitting process.

The 2014 exploration program is scheduled to start in early June. The \$3,000,000 non-brokered private placement financing announced on February 25 2014 is fully subscribed and subject to TSX Venture Exchange acceptance, will be closed in the coming days.

The 2014 program will be managed by Archer, Cathro & Associates (1981) Limited (Archer Cathro). Technical information in this news release has been approved by Matthew R. Dumala, P.Eng., a geological engineer with Archer Cathro and qualified person for the purpose of National Instrument 43-101.

[Rockhaven Resources Ltd.](#) is a well-funded company focused on growth through exploration of its own wholly-owned projects and continues to work towards adding new advanced-stage projects to its portfolio.
