

Beaufield Resources Inc.: Geologica to Complete a NI 43-101 Report for the Launay Property, Québec

04.09.2014 | [Marketwired](#)

MONTREAL, QUEBEC--(Marketwired - Sep 4, 2014) - [Beaufield Resources Inc.](#) ("Beaufield" or the "Corporation") (TSX VENTURE:BFD) is pleased to announce the commissioning of an independent Technical Report and initial resource estimate for Zone 75 on the Launay Gold project located northwest of Val-d'Or, Quebec. The report will be prepared in compliance with National Instrument ("NI") 43-101 guidelines by Geologica Groupe Conseil Inc. ("Geologica"), a consulting firm from Val d'Or, Quebec. This press release also provides results from the re-sampling of two representative holes from the 2013 drill program as well as nine surface samples.

The Launay project is funded by the Corporation per an option and joint venture agreement signed with [Melkior Resources Inc.](#) ("Melkior") in November 2013 (please refer to press release November 7th, 2013). Melkior is the operator.

Geologica

Based in Val d'Or, Quebec, Geologica Groupe-Conseil, has been offering geological services to the mining and mineral exploration industries for close to 30 years. It has an extensive and deep understanding of the Abitibi geology and was chosen by Melkior because of its expertise. The resource calculation portion of the report will be completed by Christian D'amours of GeoPoint also of Val-d'Or.

Zone 75 NI 43-101 Report

Zone 75 was discovered in 1987 by Melkior's predecessor Les Mines Messeguy Inc. with discovery drill hole number ML-87-75, which intersected 4.35 g/t (0.127 oz/t) gold over 20.98 metres (69 feet). Zone 75 coincides with a north-south striking magnetic axis and dips to the west between 65 to 80 degrees. The mineralization found at Zone 75 consists of auriferous pyrite grains disseminated in an altered granitic intrusive and remains open at depth and along strike. A metallurgic test has shown a gold recovery of 87% by gravity and cyanidation. The Launay mineralisation does not contain any arsenic.

Zone 75 was extensively explored and drilled over the years. More than 71 holes were drilled on this portion of the property for total drilling of 9749 metres.

The purpose of Geologica's report is to establish a resource estimate prepared in compliance with NI 43-101 standards and guidelines of the near-surface portion of the gold and silver mineralization at Zone 75 and determine the potential for further expansion. Gold mineralization has been intersected over varying widths along a 3 kilometre long trend as indicated on the [adjoining map](#). Beaufield is also aiming to quantify the open pit potential of Zone 75. Most of the gold-bearing drill intercepts are near surface which should make this a candidate for open pit scenario.

Drill Core Re-sampling

Geologica performed Quality Control sampling on two representative holes with near surface drill intercepts originally drilled in 2013, by sampling the remaining half core pieces (which were sawn in half to produce quarter cores). The generally low variation between the two sample sets provides verification of the original results as detailed in Table 1 below. A variation of gold distribution within samples (nugget gold effect) is the likely cause of greater variations.

Table 1 - Launay Re-sampling Results Compared to Original Assays

Hole #	From (Metres)	To (Metres)	Interval* (Metres)	Geologica Gold (g/t) (Aug. 2014)	Melkior Gold (g/t)**
LAY-21-2013	74.00	83.00	9.00	4.55	6.25
including	74.00	75.00	1.00	3.34	3.71
	75.00	76.00	1.00	5.48	5.76
	76.00	77.00	1.00	0.16	1.60
	77.00	78.00	1.00	2.43	2.14
	78.00	79.00	1.00	0.78	1.88
	79.00	79.75	0.75	33.6	48.0
	79.75	80.25	0.50	0.39	0.84
	80.25	81.00	0.75	0.14	0.15
	81.00	82.00	1.00	1.90	3.12
	82.00	83.00	1.00	1.35	1.55
LAY-14-2013	39.00	49.00	10.00	4.69	4.21
including	39.00	40.00	1.00	0.75	1.10
	40.00	41.00	1.00	0.42	0.18
	41.00	42.00	1.00	6.96	1.32
	42.00	43.00	1.00	9.95	11.05
	43.00	44.00	1.00	9.33	17.15
	44.00	45.00	1.00	2.43	1.14
	45.00	46.00	1.00	9.49	2.54
	46.00	47.00	1.00	4.33	4.07
	47.00	48.00	1.00	2.81	3.07
	48.00	49.00	1.00	0.41	0.53

* Reported drill intercepts may not represent true widths.

** As reported in March 18, 2014 and January 13, 2014 press releases.

Surface Re-sampling

Geologica also took a total of nine chip samples from Zone 75, systematically selected along channels cut by Melkior in June 2014 (See Press Release July 22nd 2014). These samples were taken to confirm the presence of gold at surface on the property and to comply with NI 43-101 guidelines. Two methods of analysis were used to determine gold values as depicted in table 2 below. The discrepancy between the two sets of results is due to the difference in the efficiency of the methods used and/or caused by the variation of gold distribution within samples (nugget gold).

The processed samples were subjected to a standard fire assay with AA technique (Au-AA23) on a 30-gram subsample. Standards and blanks were inserted randomly into the sample shipments as part of the sampling protocol. Samples were also tested using fire assay with a gravimetric finish.

Table 2 - Surface Sampling Results

Sample #	Gold (g/t) AA finish	Gold (g/t) Grav. finish	Silver (g/t)
M075080	2.07	2.34	0.8
M075081	1.87	1.82	1.8
M075082	1.02	2.03	1.3
M075083	1.04	3.82	2.8
M075084	1.93	3.09	2.7
M075085	3.56	4.79	5.3
M075086	1.45	1.47	1.5
M075087	3.24	3.09	3.8
M075088	1.78	2.28	1.8
M075089	3.69	3.90	4.2

Quality Control

The Launay site visit and the surface sampling were done by Geologica in the presence of a Melkior representative. The core re-sampling was handled by Geologica personnel at their facility. The half-core was sawn in half, with one-quarter delivered to ALS Chemex Laboratories, a commercial laboratory in Val d'Or,

Québec, together with the surface samples. The remaining quarter was retained for future reference. Following receipt of assays, visual analysis of mineralized intercepts is conducted, and additional analyses may be requested to ensure the accurate representation of the mineralized zones.

Beaufield management and technical staff are pleased that the re-sampling confirms the significance of the original gold assays and the surface potential of Zone 75 by returning assays similar to the historical results.

About the Launay Gold Project

The Launay Gold Project hosts near-surface mineralization along a three kilometre trend, which includes Zone 75 and the Principal Zone. The Project is located in the Abitibi Greenstone Belt and is approximately 70 kilometres northeast of Rouyn-Noranda, 80 kilometres northwest of the town of Val d'Or, Québec, and is easily accessible using highway 111 between LaSarre and Amos where mineral exploration and mining personnel, service providers and supplies are readily available. Both rail and electricity are available on the property. At least four gold mills are located within a 70 kilometres radius of Zone 75. The property consists of 83 claims covering 63 square-kilometres.

Beaufield entered into an option and joint venture agreement with Melkior where Beaufield will earn 50% in the project by spending \$1,250,000 over five years. Beaufield has earned 10% interest having spent over \$250,000 of exploration expenses.

Qualified Persons

This press release was prepared by Dr. Eric Hebert, PGeo, of GeoVector Management Inc., qualified person under National Instrument 43-101. Dr. Hebert has supervised the diamond drill programs from 2012 to present, logged the core, designed the sampling program and reviewed the quality control information.

About Beaufield

Beaufield is a mineral exploration company with its exploration activity focused in Quebec. Beaufield is well positioned to advance its portfolio of exploration properties and identify other potential opportunities in the mineral exploration or development stage. The Corporation is actively exploring, well financed, has no debt and has excess work credits on its properties.

The information set forth in this press release includes certain forward-looking statements. Such statements are based on assumptions exposed to major risks and uncertainties. Although Beaufield deems the expectations reflected in these forward-looking statements to be reasonable, the Corporation cannot provide any guarantee as to the materialization of the expectations reflected in these forward-looking statements. The Corporation expressly disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by applicable law.

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) has reviewed or accepts responsibility for the adequacy or accuracy of this Release.
