VANCOUVER, April 9, 2015 /CNW/ - <u>Garibaldi Resources Corp.</u> (TSX.V: GGI) (the "Company" or "Garibaldi") is pleased to report that a diamond drill rig has been mobilized to begin a follow-up program at a high-grade gold zone discovered last year at the La Patilla Property in Sinaloa, Mexico.

The final hole of 2014 drilling at the main zone at La Patilla, LP-14, intersected 10.4 g/t Au over 8.5 meters within a broader 30-meter interval grading 3.1 g/t Au at a depth between 11 and 41 meters.

Immediate objectives of this program are as follows:

- To offset drill intercepts in the area of LP-14 and test for continuity of the high-grade structure along strike;
- To test for depth extensions to the mineralized structures identified in the previous program;
- To test the potential of the La Patilla vein system along strike.

Meanwhile, Garibaldi crews continue to stockpile mineralized material at La Patilla for an initial mill feed test at Gainey Capital's processing facility approximately 40 miles to the southeast.

Steve Regoci, Garibaldi President and CEO, commented: "From Rodadero to La Patilla we continue moving forward on all fronts in Mexico. The La Patilla gold project has a very opportunistic profile with shallow drill targets and potential for near-term exploitation, so we look forward to building shareholder value as we advance these initiatives. In addition, invaluable exploration protocols gained in Mexico will complement the 2015 launch, now underway, of our fully-funded B.C. projects led by the Grizzly in the prolific Sheslay district."
