

Vancouver, BC / March 30 2016 / TheNewswire - [Cardiff Energy Corp.](#) (the "Company") (TSX-V: "CRS", Frankfurt: "C2Z.F", US Pink Sheets: "CRRDF") is pleased to announce that the acid treatment of the Clayton #1H was successfully completed. Based on drilling logs of the Clayton #1H, the well was treated with 19,000 gallons of acid in 9 intervals which encountered the highest hydrocarbon shows during drilling. During the acid treatment, strong pressure was encountered in the well with numerous gas kicks with fluids flowing to surface.

At this time a pump is being installed to pump off the completion fluid, the well will then be prepared for commercial production. Once production stabilizes the Company will be in a position to report a flow rate.

All indications are that the Clayton #1H will be a strong production well.

Jack Bal, President and CEO of Cardiff Energy Corp., states "The Clayton #1H was the first horizontal well drilled into the Gardiner Lime formation in Runnels, County Texas. We are extremely excited with the results of the acid treatment and are expecting a strong production well. We are looking forward to near term cash flow and drilling of the next set of horizontal wells in the Runnels County area."
