

Val-d'Or, Quebec / TheNewswire / July 18, 2016 - [Knick Exploration Inc.](#) (TSX-V: KNX) is pleased to report that an updated version of the 43-101 report from Donald Theberge, Eng., M.B.A. on its East-West Property will be available early August.

The East-West property is located along the Trans-Canada Highway of the Val d'Or-Malartic Mining Camp, Quebec, Canada, and is sandwiched between its' neighbours: Osisko Mining (TSX-T: OSK) / Marban deposit, and Wesdome Gold Mines (TSX-T:WDO) Kiena Mine complex.

The report, anticipated by Investors and Mining Analysts, covers salient data as previously released news by Knick. It will be related to recent findings on the property and will also offer a full and comprehensive review of the proposed 2016-17 drilling program. The report will also be distributed to various financial groups and institutions.

Presidential comment:

An increased understanding of our neighbour's geology is giving Knick a wider range of gold exploration opportunities and is no longer limiting us to previously drilled areas. Multiple untested areas have been determined near the Knick/Osisko Mining boundary, along the Kiena property limit, throughout the upper portion of the East-West property, and the central part of the property which is also under study. This 1.7 km corridor of favourable geology offers potential for further discovery. We believe the East-West property has not delivered its biggest secret /full potential to date and we intend to find it.

The company also wishes to announce, in agreement with the TSX Venture Exchange, that the private placement announced on June 2, 2016 will continue until August 17, 2016.

Gordon N. Henriksen, P.Geo., Vice President of Knick Exploration, is the Company's qualified person as defined by National Instrument 43-101. He has reviewed and approved the contents of this press release.

We seek Safe Harbour.
