

Mexus' joint venture partner (MarMar) performs first blasts at Santa Elena mine

08.08.2016 | [GlobeNewswire](#)

CARSON CITY, Aug. 08, 2016 - [Mexus Gold US](#) (OTCQB:MXSG) ("Mexus" or the "Company") announced that a series of blasts were completed at the Santa Elena mine with successful fragmentation. The initial blasts resulted in 60,000 tons of ore with grades ranging from 1 to 3 grams per ton. Marco Martinez, President of MarMar holdings, stated that this material is now ready to be moved to the heap leach pad. In addition, Mr. Martinez stated that the geomembrane heap leach pad is nearly complete with the anchoring of the liner remaining. The electro winning gold recovery equipment is currently being assembled in Monterrey, Mexico. The equipment should be ready by the time the first 1 meter lift is completed on the heap leach pad.

Added Mexus CEO Paul Thompson, "With our JV partner MarMar we continue to move closer and closer to production and reaching our ultimate goal of becoming a major gold producer!"

[Mexus Gold US](#) is an American-based exploration company with holdings in Mexico. Mexus' fully owned Santa Elena mine is located 54km NW of Caborca, Mexico. Recently, the company entered into a joint venture agreement with MarMar holdings of Mexico. The property sits in an area which is currently being mined by some of the largest mining companies in the world. Mexus has drill results which show a high grade, multi vein system throughout the property. Mexus also owns the rights to the Ocho Hermanos property, which is located 80km NE of Hermosillo, Mexico. This property will be drilled to show a proven reserve once our flagship property is in full production. Preliminary drilling on this property has been extremely promising. Founded in 2009, [Mexus Gold US](#) is committed to protecting the environment, mine safety and employing members of the communities in which it operates.
