

Cardinal Resources Ltd.: Extension Drill Programme Commences

30.09.2016 | [ABN Newswire](#)

Perth - [Cardinal Resources Ltd.](#) (ASX:CDV) ("Cardinal" or "the Company") is pleased to report that a diamond drilling programme will be initiated by mid October (weather permitting) to test the up-dip width extensions to the known gold mineralisation at the Namdini Gold Project, along with two infill holes within the original framework drilling programme.

HIGHLIGHTS

- Diamond drilling planned to test up-dip potential of the Namdini gold deposit over ~720m of strike
- An initial series of 17 'up-dip' width extension holes are planned to provide a first- pass assessment of any new near-surface gold mineralisation which may exist
- In addition, two 'infill' holes have been scheduled for drilling in order to provide better coverage within the initial 'framework' drilling programme
- Approximately 3,500 metres of diamond drilling is planned
- Maiden JORC Resource estimate underway for completion Q4 - 2016

For over 720 metres of strike at Namdini, the easternmost drill holes within the initial framework drilling programme returned strong gold intercepts such that the broad mineralised zone appears to be 'open' up-dip and to the east of the current drilling coverage.

The Company has planned to undertake an initial 17-hole diamond drilling programme to test this 'up-dip' potential. In addition to this, a further two diamond 'infill' holes will be drilled to assist in providing improved coverage within the current framework drilling programme.

In total, approximately 3,500 metres of diamond drilling is planned to be undertaken.

Cardinal's Managing Director, Archie Koimtsidis said:

"To date we've been highly focused on our framework drilling to provide the input data necessary for our initial resource estimate which has now been closed off. This new programme will focus on the potential shallow updip extensions and will provide new data for a first pass assessment of the potential for more near-surface mineralisation to the east of known mineralisation."
