Prospecting works is underway on the Ranger Project (100% Typhon), located near Rouyn-Noranda. The Ranger property is made of 13 claims adjoining the Fayolle property. Results received from the 2015 exploration program returned different gold values in a range of 0.1 to 0.4 grams of gold per tonne. The grouping of mineralized samples in two sectors located at a distance of 1.3 kilometre from one another could correspond to a new gold bearing structure that follows the same North-West orientation as the nearby Parfouru Fault.

The 2017 campaign has the objective to bound this new exploration target by using different methods including boulders sampling, Beep Mat prospecting and soil geochemistry. Works will be conducted mainly during August and September.
