About Nouveau Monde Graphite

In 2015, Nouveau Monde has discovered a major and high-quality graphite deposit on its Matawinie property, located in Saint-Michel-des-Saints, 150 km north of Montreal, Quebec. This discovery led to the completion of a Prefeasibility Study which revealed strong economics with a projected graphite concentrate production level of 52,000 tonnes per year over a 27-year period. In the coming weeks, Nouveau Monde will be distributing its first tonnes of graphite concentrate to interested parties. The demonstration plant has been built for a production capacity of 2,000 tonnes of concentrated flake graphite over a two-year period.

Moreover, in a vertical integration and sustainable development perspective, Nouveau Monde is planning the establishment of a large-scale graphite secondary transformation facility, catering the needs of the booming lithium-ion battery market. With over 60 years of experience in the world of graphite, Nouveau Monde's team develops its projects with the utmost respect of neighboring communities, while favoring a minimal ecological footprint. Nouveau Monde's project is privileged by direct access to the workforce and infrastructure needed to operate its mining project, and it can also rely on an abundant, affordable and renewable source of hydroelectricity.
