

Sirios expands its 39 property in the area of Azimut's Elmer gold discovery

16.01.2020 | [GlobeNewswire](#)

MONTREAL, Jan. 16, 2020 - [Sirios Resources Inc.](#) (TSX-V:SOI) is pleased to announce that it recently applied by map designation for 150 new mining claims in order to expand its 39 gold property. Once the claims are granted, the property will increase to 189 claims, for a total area of approximately 100 km². The southwest limit of the 39 property will be located less than 5 km northeast of the Elmer gold property.

During the summer of 2019, prospecting work was carried out on the 39 property to assess the gold potential of an interpreted northeast to southwest trending shear zone. A much greater lithological diversity than mapped by the Quebec Ministry of Energy and Natural Resources (MERNQ) was observed on the property, with the presence of a variety of lithological units, including felsic volcanic rocks. Additional prospecting was recommended based on this previous work.

The 39 property was acquired by map designation in 2018 and is wholly owned by Sirios. It is located about 30 km northwest of the km 381 relay station on the James Bay road connecting Matagami to Radisson. The property borders the Munischiwan property of Exploration Azimut and SOQUEM to the southwest, where prospecting results yielded up to 100.5 g/t Au, 435.0 g/t Ag, and 156.0 g/t Te and 1.67% Cu from grab samples (ref. Azimut press release of June 27, 2019).

Sirios focuses mainly on its Cheechoo gold discovery while actively exploring the auriferous potential of the Eeyou Istchee James Bay area in Quebec.
