

RJK Explorations Begins Drilling Kon Claims and Continues Detailed Geophysics

29.01.2020 | [Newsfile](#)

Kirkland Lake, January 29, 2020 - [RJK Explorations Ltd.](#) (TSXV: RJX.A) (OTC: RJKAF) is pleased to announce that it has begun the first phase of its 2020 drilling campaign. Phase one of the winter program will test three primary targets - the Kon kimberlite dike outcrop, followed by targets Kon 1 and Kon 2.

The Kon kimberlite dike was discovered on surface but has never been drilled. Drilling the dike is intended to better understand its structure and geology, before moving to the larger targets within the claim block. Drilling the Kon 1 anomaly will test a distinct magnetic low feature. RJK intends to use the results to potentially model other magnetic lows on the Kon claim block for further drilling. The Kon 2 anomaly is a magnetic high, located approximately 350 meters south of Kon 1, and the drilling results will also be used to potentially model other magnetic-high targets within the Kon claims.

RJK has hired of ZEN GEOMAP INC., of Timmins, Ontario, to conduct 25m-spacing magnetic drone surveys over its optioned Kon claims, located approximately 11 km south of Cobalt, Ontario. ZEN GEOMAP has been flying airborne drone geophysical surveys on RJK's Cobalt area properties over the past 11 months. The current Kon mapping program is near completion. Matthew Johnston, Geophysicist and P.Geo., with extensive geophysical experience in kimberlite exploration in the Northwest Territories, has provided RJK with the preliminary geophysical interpretation of the Kon 1 anomaly. Upon review of the geophysical data, Mr. Johnston has stated, "The Kon 1 anomaly exhibits similar magnetic signatures to that of many Lac de Gras area kimberlites in the Northwest Territories."

"We look forward to providing our shareholders with regular updates as we progress through the initial phase of drilling on some of our most interesting targets in the Cobalt mining camp. This year will be very exciting for the team at RJK Explorations as we move forward with our search for the source of the 800 Carat Nipissing Diamond." - Glenn Kasner, President and CEO of RJK Explorations

Mr. Peter Hubacheck, P.Geo, Project Manager for RJK and the Qualified Person as defined by National Instrument 43-101 has approved the technical disclosure in this release.

Forward Looking Information

This news release includes certain forward-looking statements, which may include, but are not limited to, statements concerning future mineral exploration and property option payments. Any statements contained herein that are not statements of historical facts may be deemed to be forward-looking, including those identified by the expressions "will", "anticipate", "believe", "plan", "estimate", "expect", "intend", "propose" and similar expressions. Forward-looking statements involve known and unknown risks and uncertainties that could cause actual results, performance, or achievements to differ materially from those expressed or implied in this news release. Factors that could cause actual results to differ materially from those anticipated in this news release include, but are not limited to, the financial resources of the Corporation being

inadequate to carry out its stated plans. RJK assumes no obligation to update the forward-looking statements or to update the reasons why actual results could differ from those reflected in the forward-looking statements except as required by applicable law.
