About the Company

Troubadour's main asset is the Amarillo project that is host to some of the more prospective targets developed in this world class southern BC porphyry belt in decades. The multiple overprinting anomalies (e.g. soil geochem, prospecting and geophysical anomalies) established over the last couple of years, compound the potential for a major discovery.

The Amarillo Project consists of nine (9) mineral tenures totalling 5,449 hectares and is situated within the heart of a major mining district. The multi-element geochemical signature of the Amarillo Project is consistent with a large multi-phase mineralizing system and is acutely similar to some of the neighbouring mining operations including the producing Copper Mountain mine located 60km to the southwest and the past producing Brenda mine located 10 kilometres to the north.
