

Central African Gold Engages Environmental Consultancy and Cleantech Investment Firm to Advance Carbon Plan

01.11.2021 | [Newsfile](#)

Vancouver, November 1, 2021 - [Central African Gold Inc.](#) (TSXV: CAGR) (FSE: BC21) (OTC Pink: NDEFN) ("CAGR" or "Central African Gold") is pleased to announce CAGR has engaged two internationally recognized leaders, EcoMetrix and Inerjys Ventures, to advance the implementation of carbon credit and clean energy revenue streams on its vast land positions in the Democratic Republic of Congo (DRC). With the objectives of environmental sustainability, sustainable revenue, and social commitments to domestic employment, it was imperative to both identify the ideal ESG initiatives as well as put together an operational plan that will bring the strategy to life quickly and effectively.

EcoMetrix Africa, a sustainability consulting and carbon financing firm, is assessing each potential activity's economic and technical attractiveness, their mitigation, impact, and contribution to the core business activities of CAGR. Additionally, EcoMetrix is evaluating the various Carbon Credit standards that exist today, helping to identify those that best serve the overall ESG strategy and have the regulatory scale to support efforts in the DRC. Each initiative is being evaluated for their Carbon Credit value, environmental and socio-economic impact, and the cost/benefit analysis of their implementation. CAGR will be selecting initiatives using those criteria with the assistance of Inerjys Ventures, who is specialized in structuring and operationalizing cleantech projects so that they are viable, profitable, and measurable in terms of impact.

Inerjys Ventures, a cleantech investment firm and green project developer, has been engaged to assist in structuring the CAGR carbon plan (CAP), and implementing an operational plan that involves technology suppliers, off-takers, and funding partners. Inerjys' activity in the cleantech venture space provides CAGR access to breakthrough technologies that are proven in the field but still somewhat unknown to most project developers. The combination of these latest technologies that provide cost efficiency and performance optimization with the right structuring and financial model, will allow CAGR to implement "ESG as a business", a secondary revenue stream all while building the local economy and mitigating carbon emissions.

About Carbon Credits

A carbon credit is a tradable permit or certificate that provides the holder of the credit with the right to emit one ton of carbon dioxide or an equivalent of another greenhouse gas and is essentially an offset for industries producing green-house gas. The obligation to meet reduced emission targets is now being imposed in most countries with significant penalties for non-compliance. If an industry cannot meet its required levels, there is an efficient global marketplace developing where these companies can purchase carbon credits to offset their emissions. There are three basic types of carbon credit: those from reduced emissions through efficiency such as solar photovoltaic plants, wind and other non-fossil fuel energy sources; removed emissions through carbon capture and planting forests or other vegetation providing a "carbon sink"; and avoiding emissions by such methods as stopping de-forestation.

About Central African Gold Inc.

Central African Gold is a natural resource company with a primary focus on the acquisition, exploration, development, and operation of battery metal copper, cobalt, and nickel mineral projects in the DRC. The implementation of a carbon credit program will complement battery metals operations and meet important ESG requirements. Central African Gold has the intention to acquire interests in additional concessions or relinquish concessions in the normal course of business. Central African Gold has an experienced management team located in the DRC.
