

# Newpath Resources Inc. Mobilizes Field Crew to Alpha/Bravo Project and Updates on Pegmatite Occurrences

22.08.2023 | [Newsfile](#)

Vancouver, August 22, 2023 - [Newpath Resources Inc.](#) (CSE: PATH) (FSE: 0MZ) (OTC PINK: RDYFF) ("Newpath" or the "Company") is pleased to announce that it has successfully mobilized its first field crew to the Alpha/Bravo Project for preliminary geological reconnaissance utilizing the extensive road network on the property.

The Alpha/Bravo claim group ("the Project") is comprised of 2,974 claim units covering an area of 63,118 Ha (approximately 631 square kilometres\*), making it one of the larger, early-stage lithium exploration land packages in the region.

This initial site visit involved assessing the following:

- Road access for exploration sequencing
- Confirming the accuracy of 20-year old geological mapping
- Outlining areas of good rock exposure for sampling
- Identifying favourable intrusive units and trends
- Reviewing available mediums for surface geochemical sampling techniques, including glacial till, soil or biogeochem
- Assessment of streams and catchments leading into lakes where government lake sediment sampling has previously identified anomalous lithium, cesium and rare earth elements

In addition, this initial assessment will facilitate the deployment of additional field crews, scheduled to arrive in late August / early September, to carry out a project-wide prospecting, mapping and geochemical sampling program.

Alex McAulay, the Company's CEO, states, "We are excited to get going with our fieldwork at Alpha/Bravo. Since our initial staking of this area, many companies have seen the merits of the local geological setting, resulting in considerable competitive staking around the project and many completed option agreements for adjacent projects. Although this is still early exploration work, we are enthusiastic with the prospect of discovering the source of the anomalous lithium in lake sediment samples on our project."

In preparation for the summer field season, the Company has compiled and re-processed airborne magnetic, radiometric, frequency domain EM and LIDAR data made available from the Ontario Geological Survey (OGS) and Geological Survey of Canada (GSC) over the entire Alpha/Bravo project area. The Company has also acquired high-resolution satellite imagery that will be used in tandem with the airborne geophysics and LIDAR to facilitate mapping on the ground. To date, more than 170 pegmatite occurrences in outcrop have been identified on the Project from historic mapping. Particular focus will be given to areas where clusters of these pegmatite occurrences have been identified adjacent to and within mapped muscovite-bearing granitic rocks that are associated with lithium-enriched pegmatites within the Quetico subprovince. Many of the pegmatite occurrences identified from historical mapping are also spatially associated with the anomalous lithium and cesium in lake sediment samples (see map below). In most instances, it is likely that Newpath's crews will be the first to focus on the potential for lithium or other critical elements. The first-pass reconnaissance assessed some of these pegmatite occurrences, recognizing that some should be given priority follow-up. during the late summer field season as part of a property-wide mapping and prospecting program.

Alex McAulay, the Company's CEO, also commented, "Our technical team has been busy acquiring and compiling a wealth of historical data which has helped guide our exploration planning for Alpha/Bravo this summer. We are encouraged by the pegmatite occurrences traversed to date, many of which are proximal to the highest lithium and cesium lake sediment anomalies identified by government sampling. Our original entry into this area was based on the favourable geological and structural setting for hosting lithium-bearing pegmatites, as well as the presence of highly anomalous lake sediments, all suggesting similarities with the Georgia Lake pegmatite field."

On a regional scale, the Project is situated on the western side of the Nipigon Rift Basin and Proterozoic Sibley Group sedimentary rocks that overlie a rifted, down-dropped segment of the Quetico Subprovince. Midcontinent Rift-related intrusive rocks that host many of the advanced PGM projects in the immediate area, also occur on portions of the Project. The underlying Archean Quetico Subprovince has been the focus of much of the Critical Mineral exploration activity in Ontario and is host to many early-stage and advanced Lithium projects on the eastern side of the Nipigon Rift Basin, including Rock Tech Lithium's Georgia Lake Project, (Indicated resource of 10.6MT of 0.88% Li<sub>2</sub>O & Inferred mineral resource of 4.22MT of 1.0% Li<sub>2</sub>O (see RockTech News Release dated November 15th, 2022) and Imagine Lithium's Jackpot Property, which has a historical resources of 2 Mt of 1.09% Li<sub>2</sub>O at the main Jackpot Zone, and 750,000 tons grading 1.38% Li<sub>2</sub>O at the Vegan/Newkirk showing.

#### Qualified Person

The technical content of this news release has been reviewed and approved by Douglas Turnbull, P.Geo., the Company's COO and a "Qualified Person" as defined in National Instrument 43-101 - Standards of Disclosure for Mineral Projects.

#### Director Resignation

In addition, the Company announces that Chris Reynolds has resigned from his position on the Board of Directors of Newpath. The Company thanks Mr. Reynolds for his service and wishes him the best in his future endeavours.

#### Acknowledgment of First Nations

[Newpath Resources Inc.](#) is committed to fostering lasting, transparent, trust-based relationships with the Indigenous communities where we operate. We respectfully acknowledge that our Alpha/Bravo project is on the traditional territories of many Nations including Biinjitiwaabik Zaaging Anishinaabek, Fort William First Nation, Kiashke Zaaging Anishinaabek, Red Rock Indian Band, the Métis Nation of Ontario and Red Sky Métis Independent Nation.

Newpath Resources recognizes the great privilege of conducting work on these lands and recognizes the accountability and commitment we owe to the communities who have resided here since time immemorial. Newpath shares a common interest in ensuring that the lands and waters will continue to provide cultural, environmental, and economic well-being for Indigenous communities for generations to come.

#### About Newpath Resources Inc.

[Newpath Resources Inc.](#) is a Canadian exploration company listed on the Canadian Securities Exchange under the symbol PATH. Newpath's early-stage Orefield Critical Metal Exploration Project, which is comprised of three claim groups (Alpha/Bravo, Charlie and Delta) now totalling 3,164 claim units covering approximately 667,106 Ha (approximately 667 square kilometres) west and southwest of Lake Nipigon in Northern Ontario. The Company also wholly owns the Northshore Gold Project located in the Schreiber-Hemlo Greenstone Belt.

#### Forward-Looking Information

Certain information contained herein constitutes "forward-looking information" under Canadian securities legislation. Forward-looking information includes but is not limited to, the commencement date of the fieldwork at the Alpha/Bravo Project and the mobilization of field crews. Generally, forward-looking information can be identified by the use of forward-looking terminology such as "will", "anticipates" or variations of such words and phrases or statements that certain actions, events or results "will" occur. Forward-looking statements are based on the opinions and estimates of management as of the date such statements are made and they are from those expressed or implied by such forward-looking statements or forward-looking information subject to known and unknown risks, uncertainties and other factors that may cause the actual results to be materially different, including receipt of all necessary regulatory approvals. Although management of the Company has attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking statements or forward-looking information, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements and forward-looking information. The Company will not update any forward-looking statements or forward-looking information that are incorporated by reference herein, except as required by applicable securities laws.
