## Kainantu Resources Filing of H1 and Q2 2023 Results

29.08.2023 | <u>CNW</u>

VANCOUVER, Aug. 29, 2023 - <u>Kainantu Resources Ltd.</u> (TSXV: KRL) (FSE: 6J0) ("KRL" or the "Company"), the Asia-Pacific focused gold mining company, is pleased to report the filing of its second interim results for the period ending June 30, 2023, a copy of which is available for review in the "Investors" section of the Company's website.

Highlights to report over the period include the following (with financial analysis stated in USD unless otherwise noted):

**Business and Operations** 

- Adoption of an NI43-101 inferred resource (and publication of a Technical Report) for the Kili Teke
  - project: 237Mt @ 0.34% Cu, 0.24 g/t Au and 168ppm Mo, for a total of 802kt of Cu, 1.8Moz of Au and 40kt c Mo;

areæ Au results being remarkably consistent; with 63 sample results recorded over a narrow range of up to 1.55 g /t Au (26 samples exceeded 0.2ppm Au, with an average of 0.45ppm Au);

- Cu values of up to 0.39% (3,893ppm) with 17/63 returning >800ppm Cu;
- Ag values of up to 20.8 g/t, mostly associated with the highest Au values;
- Mo values of up to 460ppm, with 27of the 63 samples returning >10ppm Mo;

Distinct groups of contiguous strongly anomalous Au (max 369ppb) results from 95 gridded soil samples at 50m spacing from 2 E-W lines 100m apart transecting the centre of KRL's priority target area:
 A 1,000m length averaging 101ppb Au and a 500m length averaging 114ppb Au;
 Cu (max 733ppm) and Mo(max 310ppm) display a close correlation with Au values;

- A highly successful study was completed and reported on the Mountain Gate Prospect at the May River Project, with analysis completed on а total of 324 samples taken from surface and trenching, with analysis
  - indi**de**Bignificant Au-Cu assay results were collected at Koras Creek in the Prospect, with assay results ranging from 1342 ppm (0.13%) Cu to 5222 ppm (0.52%) Cu, covering a distance of 194 m (with weaker anomalous gold values ranging from 0.047ppm to 0.213ppm Au also reported);
    - Possible up flow zones of a porphyry located, along with other outcrops containing mineralization and alteration, suggests an Au-rich high-sulfidation deposit which also overlies a buried porphyry Cu-Au deposit;

- Indications of other satellite porphyry Cu-Au and epithermal Au deposits have also been identified within the nearby VTEM-ZTEM anomalies;
  Channel cut samples from trenching by prior holders of the Project yielded significant Au and Cu assay
- KRL believing there is a distinct possibility that the entire Skygate Belt (ie: all known prospe results intervals; Project) will prove to be a coherent 5km-long geochemical anomaly;

 Completion of the acquisition of the remaining 90% interest in the May River Project, taking KRL's total ownership to 100%; with KRL issuing script consideration of 18 million common shares to the current owners, representing а value of C\$1,440,000 (based òn

the at the closing market price of KRL shares on March 31, 2023, and viewed at a discount to the intrinsic value);

Financial Completion • A net loss of US\$0.63 million; being in line v of • Ongoing prudent management of capital resources in H1 2023: In the current Q3, KRL is advancing steps to close a further round of funding year bis up to restrict and evaluation a detailed above) and complete remaining steps to complete the Kili Teke acquisitios from blag was \$0.78 million lower that maintaining capital while ensuring license co placement Closing cash and receivables of \$0.73 millio for Methow Salthouse, CEO of KRL, commented: \$0.46 million and net inflows from financing convertible debenture). and the KRL is pleased to provide this update for H1 2023. Key highlights include advancing corporate activities by moving to 100% ownership of the May River Project and publishing an NI43-101 compliant inferred resource for the Kill Teke acquisition. the An unneed and the second s approvals in Papua New Guinea. Mahagenood acknowledges the ongoing support of stakeholders in this regard." (with C\$500,000 Qlaatified Person prior to The scientific and technical information disclosed in this release has been reviewed and approved by Graeme Fleming, B. App. Sc., MAIG, an independent "qualified person" as defined under National bistrument 43-101, Standards of Disclosure for Mineral Projects. H1). About Kainantu Resources Limited (KRL)

Kainantu Resources 'KRL' is an Asia-Pacific focused gold mining company with three highly prospective gold-copper projects, KRL South, KRL North and the May River Project. All projects are located in premier mining regions in PNG. Both KRL North and KRL South show potential to host high-grade epithermal and porphyry mineralisation, as seen elsewhere in the high-grade Kainantu Gold District. The May River project is near the world-renowned Frieda River Copper-Gold Project, with historical drilling indicating the potential for significant copper-gold projects. KRL has a highly experienced board and management team with a proven track record of working together in the region; and an established in-country partner. KRL recently

executed an agreement to acquire the Kili Teke project in the western highlands of PNG.
