

# Norrland Moves to the Next Phase at Vittanträsket: Sub-Surface Exploratory Drilling

03.06.2024 | [ACCESS Newswire](#)

VANCOUVER, June 3, 2024 - [Norrland Gold Corp.](#) ("Norrland" or "the Company", (TSXV:NORR)(Frankfurt Exchange:8VC) is pleased to announce that the ground magnetic survey previously undertaken defined a magnetic anomaly, overlapping with a major geochemical anomaly, at Vittanträsket, which may indicate the existence of pyrrhotite and thereby potential orogenic gold mineralization.

The environmental permitting has finally moved forward and this anomaly will now be the subject of shallow exploratory drilling to investigate the geology below recent glacial moraine cover.

The Vittanträsket tenement is covered by one of the most substantial soil geochemical gold anomalies in Sweden; a Tier 1 mining jurisdiction (figure 1). Similar gold-soil geochemical anomalies are located at known deposits, such as at the famous mined-out Boliden gold mine, which suggests Vittanträsket may be comparable.

A significant north-south trending magnetic high anomaly is partly overlapping the area covered by anomalous gold-in moraine samples, taken during the widely spaced regional surveys of the Swedish Geological Survey (SGU). Moraine is un-sorted boulder debris, left behind by the glaciation of northern Europe approximately 10,000 years ago. Since that time, the moraine has been in-situ and subjected to natural geochemical processes. The moraine cover is substantial in the gold-prospective region in northern Sweden; thus, potential exists for previously un-discovered deposits.

A shallow sub-surface scout drilling program will be undertaken by conventional track-mounted drilling equipment. The first exploratory drill holes will be placed along a logging road drilling bedrock to interpret the geology, and if successful, an additional five holes will follow.

Anders West, CEO, commented:

"The geophysical anomaly coupled with the geochemical anomalies upon which Norrland based the acquisition of Vittanträsket is a major step forward and reinforces our belief that the potential remains for a significant new gold discovery to be found under moraine cover. These largely unexplored terranes are what Norrland is focusing on. The upcoming drilling program presents the opportunity to understand the geological structures below surface which could set the pace for further exploration work and further drilling".

## Cautionary Note Regarding Forward-looking Statements

This news release contains certain statements that may be deemed "forward-looking statements." Forward-looking statements are statements that are not historical facts and are generally, but not always, identified by the words "expects", "plans", "anticipates", "believes", "intends", "estimates", "projects", "potential" and similar expressions, or that events or conditions "will", "would", "may", "could" or "should" occur. Although the Company believes the expectations expressed in such forward-looking statements are

based on reasonable assumptions, such statements are not guarantees of future performance and actual results or realities may differ materially from those in forward-looking statements. Forward-looking statements are based on the beliefs, estimates and opinions of the Company's management on the date the statements are made. Except as required by law, the Company undertakes no obligation to update these forward-looking statements in the event that management's beliefs, estimates or opinions, or other factors, should change.

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this press release.
