The company has resumed its drill program two weeks ago and is currently working towards the completion of its 2500 m phase 1 drill program on the Greenwood Project's Wild Rose and Tam O'Shanter claims. New assay results will be available in the near future. In view of the drill results published earlier this year, the Company is optimistic that the historic drill results will be verified and that the known mineralized zone on the Wild Rose Property extending onto the Tam O'Shanter property will prove the widespread low grade bulk tonnage of gold and copper mineralization and higher grade IN THE KNOWN veins systems within the 2000x200x200 m zone.

The reader is cautioned that historical drilling results are being confirmed by current drilling, and such historical results cannot be relied upon until reconfirmed. There are no known mineral resources on the property, and there can be no assurance that any mineral resources will be discovered on the properties, and if discovered there is no assurance that any mineralization may be economically extracted.

The information in this release has been reviewed on behalf of the Company by consultants Dr. Stewart A Jackson, P. Geol. and Mike Dufresne, M.Sc., P.Geol., Qualified Persons. The program is being supervised by Mike Dufresne of APEX Geosciences Ltd.

ON BEHALF OF THE BOARD OF DIRECTORS OF GOLDEN DAWN MINERALS INC.
