

Northaven Resources Corp.: Option to Purchase King Solomon Basin

24.03.2011 | [Marketwired](#)

VANCOUVER, BRITISH COLUMBIA -- (Marketwire - March 24, 2011) - [Northaven Resources Corp.](#) (TSX VENTURE: NTV) is pleased to announce that it has entered into an option to purchase a highly prospective BC gold property comprised of 782.39 hectares, located approximately 20 kilometers southeast of Port Alberni on Vancouver Island, British Columbia, and known as the "King Solomon Basin".

The property contains a series of northwest-trending sub-parallel shear zones which appear to lay sub-parallel to the contact between andesites of the Devonian age Duck Lake Formation (Sicker Group) and the later aged Early to Middle Jurassic Island Plutonic Suite diorites.

Contained within the property are the former Black Panther Mine which produced from 1947 – 1950, averaging 9.33 g/t gold, 17.28 g/t silver with minor copper and lead over widths of up to 2.1 meters, as well as a number of gold showings including the Black Lion, Havilah, Golden Eagle, Gillespie, Sol B and McQuillan Creek.

The Black Panther shear zones have been traced for over 3,200 meters and are characterized by later cross-cutting gold-bearing quartz-carbonate stringers. Assays obtained from grab samples range in values from 2-50 g/t gold, 3-300 g/t silver, with minor amounts of copper (0.1%) copper, zinc and lead.

Terms of the four year option commencing from the date of receipt of regulatory approval ("Effective Date") are as follows:

	Cash Payments	Shares Issued	Work Expenditures
1. Effective Date	\$10,000	50,000	
2. 1st Anniversary	\$15,000	50,000	\$100,000
3. 2nd Anniversary	\$25,000	50,000	\$150,000
4. 3rd Anniversary	\$35,000	50,000	\$200,000
5. 4th Anniversary	\$40,000	50,000	\$250,000

The option is subject to an NSR royalty of 3.00% which may be repurchased for \$500,000 per 1.0%. The option Agreement is subject to acceptance by the TSX Venture Exchange.

The Property has only been lightly explored in the past and has not been subject to modern geophysical and geochemical evaluation.

The Property contains numerous occurrences of good grades of gold mineralization in a structurally controlled geological environment similar to that of the Myra Creek mine (Westmin) some 85 km to the northwest. This represents a favourable zone for the evaluation of Reduced Intrusion-Related (RIR) polymetallic mineralization, which, if supported by further exploration, offers good potential for the discovery of a significant gold resource.

The Company plans, subject to regulatory approval and funding, to employ a helicopter-airborne multi-program geophysical evaluation to assist in the preliminary understanding of the structure and plans also to identify, if possible, hidden zones of mineralization. On-ground follow-up prospecting, geochemical sampling and infill geological mapping is expected to commence in early June, 2011, to develop a better understanding of the nature of the mineral occurrences and their relationship with existing geological models.

On behalf of the Board of Directors of NORTHAVEN RESOURCES CORP.

ALLEN D. LESCHERT

CEO
