Anglo Canadian Mining Corp. (TSX-V: URA) (the "Company") is pleased to announce the completion of holes 14 and 15 at its Princeton Copper Gold Property located 22 km south of Princeton B.C. The property adjoins the Copper Mountain mine along its southern boundary and lies close to the proposed Super Pit. These recent drill holes are focused on the first of three high chargeability areas within the property.

Drill Hole Summary

Drill Hole 11-PR-14 was collared 500 meters east of hole # 11-PR- 13. This hole cut 505 meters of altered Nicola Volcanics with 2% to 5% pyrite and chalcopyrite, occasional one to six meter diorite dykes and two larger crowded feldspar porphyry dykes. Alteration ranges from moderate propylitic to potassic alteration in the form of pervasive secondary biotite.

Drill Hole 11-PR-15 was collared 230 meters north west of hole # 11-PR-13. This hole was mineralized from near surface to 270 meters. The hole cut 270 meters of mixed Nicola Volcanics and sediments. Within the package of rocks are altered (sericite, potassium feldspar and secondary biotite) mineralized rocks. This hole also cut three mineralized sections of 52 meters (16 - 68 meters) 14 meters (72 - 86 meters) and 156 meters (114 - 270 meters). Mineralization consists of pyrite, pyrrhotite, chalcopyrite, chalcocite and bornite. Some argillaceous sections contain a high percentage of pyrite and pyrrhotite with fine grained chalcopyrite and trace specularite. They also contain thin sulphide veinlets containing chalcopyrite.

Both holes have been logged, split and shipped for analysis to Acme Labs in Vancouver. Assays will be reported when received.

Drilling continues to focus on areas in close proximity to the Copper Mountain open pit mine, which recently shipped its first shipment of concentrate to Japan.

The company employs a quality assurance/quality control program that employs introduction of certified analytical standards and blanks as well as secure sample chain of custody of samples from drill to laboratory. Technical information contained in this news release was reviewed David St. Clair Dunn, qualified persons as defined under National Instrument 43-101.

About Anglo Canadian Mining Corp.

Anglo Canadian Mining is a junior mineral exploration company with copper, gold and uranium properties in Quebec, Colorado, British Columbia, and Yukon. For more information on the Company and its projects, please visit the website at www.anglocanex.com
