Anglo Canadian Mining Corp. ("Anglo Canadian" or the "Company") (TSX Venture: URA) is pleased to announce drill results from the Princeton Copper Gold Project located near Princeton, BC in close proximity to the Copper Mountain Mine. Drill assays have been received for 3 of 4 holes. All results have been processed by Acme Labs in Vancouver, BC. Results from these first 3 holes are as follows:

PR-11-21 was drilled -50 degrees northward toward the intrusive for a total length of 206.4 meters and contained the following:

Depth (meters)	Intersection (meters)	Cu (%)
10-42	32	0.212
57-67	10	0.190
70-103	33	0.137
108-146	38	0.564

Holes PR-11-19 and PR-11-20 were anomalous to highly anomalous and below 0.1% copper.

Holes PR-11-19 was drilled in the Haul Road zone, and holes PR-11-20, 21 and 22 were drilled in the Combination zone. Hole 19 was drilled 1.5 km's from hole 20. The grid area hosting the 3D-IP/Mag survey covers 1 km by 2.5 km's and is the focal area of drilling. The Company claims cover approximately 2200 hectares most of which adjoin the Copper Mountain claims. The company has also received approval for an additional 15,000 meter drill program at Princeton which is expected to commence early in 2012, as previously announced on November 30, 2011.

The company employs a quality assurance/quality control program that employs introduction of certified analytical standards and blanks as well as secure sample chain of custody of samples from drill to laboratory. Technical information contained in this news release was

reviewed by David St. Clair Dunn, P. Geo, a qualified person as defined under National Instrument 43-101.
