

# Bolero Resources Corp.: Aeroquest Commences Multiple Airborne Surveys Over BC "REE" Projects

28.06.2011 | [Marketwired](#)

VANCOUVER, BRITISH COLUMBIA -- (Marketwire - June 28, 2011) - [Bolero Resources Corp.](#) (the "Company" or "Bolero"), (TSX VENTURE: BRU) (FRANKFURT: U7N1) announces that Aeroquest Ltd. has commenced AeroTEM and Radiometric geophysical airborne surveys over the "Carbonatite Syndicate" rare earth element project, located in Northern British Columbia, contiguous to Spectrum Mining's "Wicheeda" Rare Earth Element "REE" discovery. These airborne surveys will be overlain with Bolero's recent highly anomalous REE sampling and previous survey results to define high priority drill targets for an upcoming 2011 drill program. Aeroquest will be flying a similar airborne geophysical survey over Bolero's "Charge" REE property directly following the completion of work on the "Carbonatite Syndicate" property.

Carbo REE Map: [http://www.boleroresources.com/docs/carbonatite\\_syndicate\\_claims\\_201101.pdf](http://www.boleroresources.com/docs/carbonatite_syndicate_claims_201101.pdf)

Bolero Resources' President and CEO, R. Bruce Duncan, stated "The 2011 work and drill season is now underway for Bolero, this will be the most active year of exploration to date for the company. These airborne surveys will help to identify priority drill targets on our substantially enlarged BC rare earth projects. Diamond drill programs are being planned on all three of our BC gold and rare earth projects and are scheduled to commence shortly. This will be a milestone year for Bolero with drill permits now in place and multiple fully funded drill programs to commence shortly. The company has substantially strengthened its board of directors and advisory board as well as the engaging Discovery Consultants to oversee this year's work programs."

These large scale geophysical and radiometric airborne surveys will consist of over 7000 line kilometres to be flown at 200 and 100 metre line spacing. The AeroTEM system is ideal for its superior ability to contour in northern BC's rugged terrain. The airborne surveys will focus on further defining high priority Rare Earth Element drill targets contiguous to Spectrum Mining's "Wicheeda" Rare Earth discovery and identifying drill targets on Bolero's new "Charge" REE prospect that contains the highest Lanthanum (La) (1146 ppm), Yttrium (Y) (647 ppm), and second highest Cerium (Ce) (1247 ppm) "REE" soil samples in the province of British Columbia's Regional Geochemical Survey (BCRGS) database.

Approximately 4,000 line kilometers will be flown on the "Carbonatite Syndicate" REE prospect using 200m and 100m line spacing. The 2010 soil sampling programs on the "Carbonatite Syndicate" property substantially increased Rare Earth Element soil sample values. Assays from recent soil grids (Oct 4th 2010) increased maximum concentrations of Cerium (Ce) and Lanthanum (La) to as high as 1205 ppm and 663 ppm respectively, far exceeding previous results of 631 ppm and 377 ppm. Thirty of 228 soil samples returned total "REE+Y" contents above 1000 ppm and show elevated levels of "pathfinder elements" such as Niobium (Nb) and Barium (Ba).

Approximately 3,000 line kilometres will be flown on Bolero's "Charge" REE prospect, located 50 kilometres southeast of the Kemess Mine in northern BC. The "Charge" prospect currently contains the highest Lanthanum (La) (1146 ppm), Yttrium (Y) (647 ppm), and second highest Cerium (Ce) (1247 ppm) samples in the province of British Columbia's Regional Geochemical Survey (BCRGS) database, with over 7000 samples recently taken from the region.

Dr. Roger Steininger, Ph.D., CPG (AIPG), a Company Director, is the "Qualified Person" (as such term is defined by NI 43-101) responsible for the preparation of the technical information in this release.

## About Bolero Resources Corp.

Bolero Resources Corp. is a Canadian Gold and Rare Earth exploration and development company. Our primary assets include: 100% interest in the Red Chris South prospect, covering over 13,000 acres in north-western BC, contiguous to Imperial Metals Corp (III.T) and; The "Carbonatite Syndicate" consisting of 211 mineral claims prospective for Rare Earth Elements covering over 90,000 hectares (222,415 acres) contiguous to Spectrum Mining Corporation in northern BC and; 2 separate quartz claim blocks covering over 6,500 acres, in the "White Gold District" of the Yukon; and the "Charge" BC REE prospect. The

Company is listed on the TSX-Venture Exchange under the symbol BRU as well as the Frankfurt Exchange under U7N1. For more information, please visit: [www.boleroresources.com](http://www.boleroresources.com) or contact Investor Relations Toll Free.

On behalf of the Board of Directors

R. Bruce Duncan  
President & CEO
