

Amerix Announces Contract for Drilling at Limao Gold Property, Brazil

18.04.2012 | [Marketwired](#)

TORONTO, CANADA -- (Marketwire) -- 04/18/12 -- [Amerix Precious Metals Corporation](#) (TSX VENTURE: APM) (FRANKFURT: NJGN) ("Amerix" or the "Company") reports that it has signed a contract with Energold Perfuracoes Ltda, of Brazil to complete a drill program at the Company's 100% owned Limao Gold Property ("Limao"), located in the Tapajos Gold Province, Para State, Brazil. Drilling is expected to begin over the next 30 days.

The Company has spent the past season at Limao completing mapping, rock sampling, and ground geochemical surveys that consisted of manual and power auger sampling over four extensive grids. The grids were targeted on historical garimpeiro workings as well as prospective areas identified from an airborne magnetic and radiometric geophysical survey. Recently, an IP survey (3D Induced Polarization/Resistivity geophysical survey) was completed over the principal targets that have been developed by the Company's exploration programs (Amerix News Release NR 2012-04).

At Limao, Amerix's geologists have outlined three target areas for drilling. These consist of the Limao Pit area on the Central Grid where historic, non 43-101 compliant drilling was reported to have intersected significant gold in pyritic syenite. A second target has been outlined on the South Grid where high grade gold has been reported in quartz-sulphide veins hosted along a sheared contact between quartz diorite, diabase and granite (Amerix News Release NR 2012-03). A third target has been identified as the Jambu Zone, a geochemical gold anomaly that is located on a ridge, 800 metres northwest of the Limao Pit on the Northern Grid (Amerix News Release NR 2012-04). Amerix's drill program anticipates testing all three targets with conventional core drilling methods, using qualified assay laboratories to assay the drill core samples and utilizing standard quality assurance and control (QA/QC) practices under the supervision of the Company's geologists.

Amerix's 2011 and early 2012 exploration programs at Limao have delineated multiple, anomalous gold geochemical zones, however, only the three zones described above will be tested in this first drill campaign. To date, only a small portion of the 11,500 hectare Limao property has been methodically explored. Results of the drilling will be a guide to the further exploration at Limao and in the area. The Tocantinzinho trend that hosts the Limao Gold Property extends northwesterly through the Tapajos Gold Province for several hundred kilometers and hosts gold deposits and resources as reported by Eldorado Gold Corporation (Tocantinzinho), Magellan Minerals Ltd (Coringa and Cuiu Cuiu), Brazilian Gold Corporation (Sao Jorge) and others.

Mr. Ryan Grywul, P. Geo., Vice President, Corporate Development for Amerix, and a qualified person as defined in National Policy 43-101 is responsible for all technical information contained in this news release.

Amerix is well funded to complete its first drill campaign at Limao, and is excited by the potential of the Limao Gold Property, located in the historically gold rich Tapajos district of Brazil.

About Amerix Precious Metals Corporation

Amerix Precious Metals Corporation is an Ontario company, managed by an experienced team, exploring for precious metals in Brazil. Amerix's objective is to create value for shareholders through the delineation and expansion of bedrock gold resources, and realization of value from placer and tailings gold resources at the Company's properties. Brazil has significant gold potential and is a proven mining-friendly country. Amerix will continue to seek exploration properties of merit via staking, acquisition or merger. The Company's shares trade on the TSX Venture Exchange under the symbol "APM" and at the Frankfurt Stock Exchange under the symbol "NJGN".
