

Integra Gold Intersects 37.7 g/t Gold over 4 meters, Adds Third Drill Rig to Lamaque Gold Project

02.03.2012 | [Marketwired](#)

- TRIANGLE ZONE DRILLING INCREASED TO 6,500 METERS

- 2012 PROGRAM INCREASED TO 30,000 METERS

- DRILLHOLE TM-12-06 ALSO INTERSECTED 4.7 G/T OVER 10 METERS ABOVE THE HIGH GRADE ZONE

VANCOUVER, March 2, 2012 - [Integra Gold Corp.](#) (TSX VENTURE:ICG) (The "Company") is pleased to announce preliminary assays from the Triangle Zone's current drill program. Initial high-grade results indicate the potential for additional resources at this zone. Given the high grade of existing resources on the Triangle, 18.73 g/t inferred and 13.51 g/t indicated, this zone continues to be a top priority.

Eleven of eighteen scheduled holes have been drilled with the completion of this phase of the program planned for mid-April. A total of 3140 meters have been drilled to depths of up to 530 meters as part of the response to the recommendations made in the Estimate of Resources and Modeling of the Triangle Sector report published November 16, 2011. Drilling up to an additional 3400 meters in all directions has been proposed, of note; east towards the Donald property with some holes to test an intrusive in an area north of the zone in line with the #4 Plug and also to determine whether the Triangle Zone extends to the #4 Plug.

"Continuing to drill the Triangle Zone remains a high priority for the Company. This high grade gold zone has been validated and made compliant over the past 3 years and published its first resource in November, 2011. The replication, although preliminary, of high grade intersects in this current drill session adds to the Company's incentive to explore the extents of this zone in all directions," comments Company President and CEO, John de Jong. "The Triangle Zone's proximity to the #4 Plug and what lies between these two zones is something that the Company also intends to explore further."

Significant Drill Highlights:

Hole #	From (m)	To (m)	Length (m)	Au g/Mt
TM 12 - 06	184.00	194.00	10	4.71 g/T Au
And	196.00	200.00	4	37.70 g/T Au

Resource Estimate for Triangle Zone

Gold Deposit Name	Metric Tonnes	Grade (Grams per Tonne - uncut)	Ounces	Grade (Grams per Tonne - uncut)	Resource
Triangle Zone***	140,840	13.51 g/t			61,168 indicated
Triangle Zone***	220,788	18.73 g/t			132,987 inferred

*** For the Triangle Zone, an Ordinary Kriging (OK) estimator was utilized

OTHER UPDATES:

Sixteen Zone

The data is being compiled by Christian d'Amours of GeoPointcom in Val d'Or, Quebec and results are expected to be released shortly. Dependent on recommendations from GeoPointcom, additional drilling may take place on this zone in 2012.

PDAC

Please be sure to drop in at Booth #3147 on Sunday and Monday and at the Core Shack (Booth #5026) on Tuesday and Wednesday.

Company and Gold Project Location

Integra's Lamaque Gold Project is located in the Val-d'Or gold camp in the Province of Quebec, Canada, which is rated one of the best mining jurisdictions in the world. Infrastructure, human resources and mining expertise are readily accessible.

The Company's shares are tightly held by a number of private investors, institutions and a major gold producer, Shandong Gold International Mining Ltd. The Company's focus is to advance gold zones demonstrating potential for open pit mining and where gold resources can be added quickly to the reported gold resource of 800,799 metric tons, average grade 6.33 g/t for 162,962 ounces Troy gold indicated and 2,335,530 metric tons, average grade 6.91 g/t gold for 518,643 ounces Troy gold inferred.

The gold project shares its northeastern border with the producing Sigma Mine which has produced 4.7 million ounces of gold to date and has reported significant gold resources and reserves. On its northwest border the Main Plug produced the majority of its 4.7 million ounces of gold for the historic Lamaque Mine. The Agnico-Eagle Goldex Mine, located approximately 6 kilometers west, reported reserves of 3.4 million gold ounces (mine closed recently due to engineering difficulties), and directly west of Goldex is the producing Osisko Mine reporting reserves of 10.71 million ounces of gold.

The Lamaque Property is located about 550 km northwest of Montréal, Quebec. The property consists of four (4) contiguous mining concessions and twenty (20) mining claims for a total of 1,459 hectares, owned 100% by Integra.

QUALITY ASSURANCE - QUALITY CONTROL

Thorough quality assurance and quality control program (QA/QC) protocol was utilized on the project including duplicate, blank and standard samples for all the holes. The core samples were respectively submitted directly to ALS Laboratory Group and Bourlamaque Labs in Val-d'Or for preparation and analysis. Analysis was conducted on 1 assay ton samples. Analysis of gold was by fire assay, with a gravimetric finish on samples exceeding 5 g/t gold. The gravimetric assay results were used for the reported composite intervals. The Lamaque project exploration is under the direct supervision of Alain Beauregard, P.Geol., of Geologica Inc., an independent qualified person as designated by National Instrument 43-101, and Daniel Gaudreault, ing., Geol., an independent qualified person as designated by National Instrument 43-101, who has reviewed the technical content of this release.
