Vancouver, British Columbia, Canada, September 13, 2012 - [Rock Tech Lithium Inc.](#) (TSX-Venture: RCK; Frankfurt: RJA; Pink Sheets: RCKTF) (the "Company" or "Rock Tech") is pleased to announce the results of surface grab samples taken from its Lochaber graphite property in Quebec, Canada. The results demonstrate the presence of graphite mineralization with grades up to 22% graphite.

In May 2012, a total of eleven (11) surface samples were collected from various outcrops and boulders as part of a due diligence property visit by the Company's geological team. The majority of the samples were collected from the historical graphite occurrences, past producing mines and other areas of past exploration work. The surface samples were submitted to Techni-Lab Abitibi Inc., a branch of Activation Laboratories Ltd., and were tested by using the following analytical packages: Code 5D, analyzing C-Graphite (infrared) where the sample is subjected to a multistage furnace treatment to remove all forms of carbon with the exception of graphitic carbon; and C-Total (infrared), a procedure that determines the most volatile organic carbon species.

Company President and CEO, Eunho Lee, commented, "We are pleased with the results of the grab samples as they confirm the presence of graphite mineralization on our Lochaber project."

Analytical results are presented in the following table:

Sample Number	Easting	Northing	Sample Type	% Graphite
?	?	?	?	?
Kelly 12-01	475686	5060020	Grab	16.70%
McLaren 12-01	475468	5059405	Grab	3.01%
Burke 12-01	475844	5060590	Grab	20.70%
Burke 12-02	475844	5060590	Grab	10.40%
Burke 12-03	475855	5060588	Grab	22.00%
Burke 12-04	475855	5060568	Grab	16.60%
Plum 12-01	475196	5055367	Grab	0.75%
Plum 12-02	475285	5055390	Grab	10.30%
Plum 12-03	475289	5055397	Grab	4.91%
Plum 12-04	475387	5055475	Grab	13.60%
Plum 12-05	474986	5055433	Grab	1.11%
