Urastar Gold Corp. Announces 19.8m of 0.92 G/t Gold Intercepted at El Antimonio

20.09.2012 | The Newswire

September 20, 2012 - VANCOUVER, Canada - Urastar Gold Corp. ("Urastar" or the "Company") (TSX-V:URS) (FSE: 3U3) (OTCQX: URNRF) has obtained additional significant intercepts from RC drilling at its El Antimonio Property. To date, Urastar has completed over 10,500m in49 holes of reverse circulation (RC) drilling as phase 1 of the exploration program at El Antimonio. Of the forty-four holes announced to date, thirty-one have intersected mineralized zones, including several wide gold bearing intercepts that were previously announced. Recent significant results are given in the table below.

Hole	From (m)	To (m)	Core Interval (m)	Gold (g/T)	Comment
EA-12-38	51.8	71.6	19.8	0.92	includes 56.4-59.4 (6.0m) @ 3.19 g/T Au
EA-12-39	96.0	125.0	29.0	0.30	includes 120.4-121.9 (1.5m) @ 1.54 g/T Au
EA-12-43	24.4	41.1	16.8	0.38	?
EA-12-43	67.1	128.0	61.0	0.22	includes 94.5-106.7 (12.2m) @ 0.44 g/T Au
EA-12-43	176.8	196.6	19.8	0.19	?
EA-12-43	225.6	251.5	25.9	0.25	hole stopped in mineralization

Note: The above results are based on drill cutting samples that were submitted to ALS Minerals in Hermosillo for preparation. Sample analysis was done at ALS Minerals in North Vancouver, Canada for gold by the Fire Assay method on 30 gram subsamples with AAS finish. ALS is an independent ISO certified commercial laboratory. Quality control included monitoring results of certified reference standards, duplicates and blank samples submitted with the samples. Intervals are measured down the hole and may not represent true thickness.

Together with the previously announced intercepts, these results show that the gold mineralization is widespread, and that there is excellent potential for a large, bulk tonnage gold deposit. Assay results from the remaining five RC holes and three core holes will be released as they become available.
