

# Urastar Gold Corp. Announces Phase 1 Completed with more Intersections at El Antimonio

10.10.2012 | [The Newswire](#)

[Urastar Gold Corp.](#) ("Urastar" or the "Company") (TSX-V:URS) (FSE: 3U3) (OTCQX: URNRF) is pleased to report significant intercepts obtained from the final RC drill holes of the phase 1 exploration program at its El Antimonio Property. To date, Urastar has completed 10,517m in 49 holes of reverse circulation (RC) drilling at El Antimonio. Thirty-seven of these holes intersected mineralized zones, including several wide gold bearing intercepts previously announced. Additional significant results from the last five holes are given in the table below.

Hole	From (m)	To (m)	Core Interval (m)	Gold (g/T)	Comment

*Note: The above results are based on drill cutting samples that were submitted to ALS Minerals in Hermosillo for preparation. Sample analysis was done at ALS Minerals in North Vancouver, B.C., Canada for gold by the Fire Assay method on 30 gram subsamples with AAS finish. ALS is an independent ISO certified commercial laboratory. Quality control included monitoring results of certified reference standards, duplicates and blank samples submitted with the samples. Intervals are measured down the hole and may not*

Urastar CEO, Adrian Robertson, P.Eng., comments: "These results cap off a very successful phase 1 drill campaign and add to the significance of the property and its high potential for a large, bulk tonnage gold deposit. Planning is underway for an aggressive exploration program at El Antimonio in 2013. The focus of next year's work will be to expand on the success we had in the border zone and dead man zone and also to drill several high potential targets we weren't able to test as part of this year's program."
