

# Stratton Releases Final Drill Results From MAC 2011 Program

01.03.2012 | [Marketwired](#)

## High Grade Results Continue With 51 Metres of 0.20% Molybdenum and 0.29% Copper

VANCOUVER, March 1, 2012 - [Stratton Resources Inc.](#) (TSX VENTURE:SI) ("Stratton" or the "Company") is pleased to announce the final assay results from its 2011 drilling program at the MAC Molybdenum-Copper Project ("MAC") located in central British Columbia, Canada.

Stratton completed its 2011 exploration campaign at the MAC project in mid-December. Previously, the Company announced high-grade drill results from the first twenty diamond drill holes (see news releases dated November 23, 2011 and January 12, 2012). The results of the final twenty-four holes have been received and significant intercepts are reported in the tables below. Please see the end of this release for a drill hole location map of the forty-four holes drilled in the 2011 program or visit the Company's website at [www.strattonresources.com](http://www.strattonresources.com).

In addition to the previously reported twelve holes drilled on the east contact zone, results have been received for eleven new holes from this zone which all returned significant molybdenum-copper mineralization values including a highlighted intercept of 183 metres of 0.094% Mo and 0.179% Cu in drill hole #36, which included 51 metres of 0.202% Mo and 0.286% Cu.

Results from the final holes on the east contact confirm a high-grade core trending northwesterly towards the area of high-grade intercepts of the north-west contact. Potential for a structural and mineralized corridor through the intervening quartz monzonite stock remains untested.

### East Zone Contact Drill Results

Hole ID (metres)	From To (metres)	Width (metres)	Mo (%)	Cu (%)					
MC11-21	96	233	137	0.072					
including	124	158	34	0.179					
MC11-23	166	222.4	56.4	0.063					
including	180	194	14	0.179					
MC11-25	130	254	124	0.077					
including	130	176	46	0.179					
MC11-29	143.5	246	102.5	0.094					
including	173	227	54	0.179					
MC11-31	162	308	146	0.060					
including	198	240	42	0.179					
MC11-34	46	223	177	0.079					
including	131	180	49	0.179					
MC11-36	44	227	183	0.094					
including	126	177	51	0.202					
MC11-39	86	127.5	41.5	0.045					
MC11-42	272.8	334	61.2	0.059					
including	295	334	39	0.179					
MC11-43	237	295	58	0.063					
MC11-44	200	303	103	0.049					
including	200	246	46	0.179					

A further nine holes (in addition to the eight previously reported) have been received from the north-west contact with continued showings of significant molybdenum-copper mineralization. Hole #26 intersected 118

metres of 0.105% Mo and 0.135% Cu, which included 56 metres of 0.155% Mo and 0.20% Cu.

### North-West Contact Zone Drill Results

Hole ID (metres)	From To (metres)	Width (metres)	Mo (%)	Cu (%)				
MC11-22	93	175	82	0.054				
including	93	107	14	0.105				
MC11-24	86.3	107	20.7	0.072				
MC11-26	94.2	212	117.8	0.105				
including	117.9	174	56.1					
MC11-30	104.1	266	161.9	0.069				
including	184.9	228.5	43.6					

"The initial drill program has shown the potential for the Camp Zone at MAC to be a significant molybdenum-copper porphyry deposit with a high-grade core that is near surface and would provide an excellent starter pit for a future mining operation. We have begun work estimating the initial NI 43-101 compliant resource on the Camp Zone and look forward to reporting the results in the coming weeks," said Greg McCunn, President and CEO. "We see potential to expand resources at the Camp Zone with further drilling as the mineralization continues at depth, to the south and to the east. When you combine the upside potential of expanding the Camp Zone with the additional exploration targets that were identified on the claims by our ground and airborne geophysical surveys, we have the opportunity to add significant shareholder value through additional exploration in 2012."

### Qualified Person

Richard Haslinger, P.Eng. is the qualified person under NI 43-101 who has reviewed the technical disclosure in this news release and is responsible for the technical information contained in this release.

At MAC, HQ diamond drill holes are positioned and oriented by GeoMinex Consultants Inc. who then also lay out and oversee sampling and insertion of quality control standards, blanks and duplicates into the core sample stream. Samples are collected from two metre sawn core intervals and transported to Acme Laboratories for near-total hot four-acid digestion and ICP-ES (inductively coupled plasma emission spectroscopy) multi-element analysis.

### About Stratton Resources

[Stratton Resources Inc.](http://www.strattonresources.com) is a Canadian mineral exploration company focused on the discovery and development of porphyry molybdenum-copper deposits in British Columbia and Arizona.

Stratton's goal is to build a quality asset portfolio consisting of base metal properties at various stages of development. With an experienced management team, that has a proven track record of successful discovery and development of mineral deposits. Stratton is positioned to rapidly build shareholder value.
