Vancouver, British Columbia, Canada, April 22, 2013 - Rock Tech Lithium Inc. (TSX-Venture: RCK; Frankfurt: RJIA) (the "Company" or "Rock Tech") announces updated assay results for two drill holes at its Lochaber graphite project in Quebec.

The assay results of these drill holes, PB-12-08 and PB-12-09, were originally disclosed in a news release on December 19, 2012. After interpreting the assay results, the Company sent the remaining core intersections not initially submitted to the laboratory.

Highlights from these two drill holes include:

-Drill hole PB-12-08 intersected 120.60 metres of graphite at various depths, ranging from 1.18% to 3.01% graphitic carbon ("Cg"), including 56.58 metres at 2.48% Cg, 22.98 metres at 2.33% Cg, 14.04 metres at 3.01% Cg, 17.20 metres at 1.97% Cg and 9.80 metres at 1.18% Cg; and

-Drill Hole PB-12-09 intersected 112.27 metres of graphite at various depths, ranging from 2.09% to 6.00% Cg, including 59.92 metres at 2.09% Cg, 44.25 metres at 2.84% Cg, 7.10 metres at 3.42% Cg, and 1.00 metres at 6.00% Cg.

The above mentioned drill holes tested the graphite mineralization along electromagnetic conductor 'C'. The electromagnetic conductors were identified during geophysical surveys in September, 2012 (click here to view a map).

These two drill holes are the last of the resubmitted samples from the first phase of drilling. The Company expects to release the assay results for the remaining drill holes in the near future.

Quality Assurance/Quality Control

All core samples are logged and split by wet diamond saw with half sent to the lab for analysis and half stored securely on site. The core sample lengths typically average 1 metre but vary depending on geological boundaries. Additional QA/QC procedures include inserting blanks and standards into the core sample stream at industry standard intervals with duplicate core samples taken at intervals of twenty. Core samples are prepped and analyzed by Global Mineral Research Limited in Burnaby, British Columbia. During analysis, the core samples are dried, pulverized, leached and roasted at 450° Celsius and 1200° Celsius with measured weights taken between double ignitions. The laboratories also conduct duplicate and internal standard samples at intervals of ten as part of their QA/QC program.

Drill Hole ID	?	Length From	Length To	Width	Graphite	Geophysical Conductor
	?	Metres	Metres	Meters	%	
PB-12-08	?	5.46	28.44	22.98	2.33	C
	?	35.18	91.76	56.58	2.48	
	?	96.62	110.66	14.04	3.01	
	?	126.00	135.80	9.80	1.18	
	?	145.80	163.00	17.20	1.97	
PB-12-09	?	7.00	8.00	1.00	6.00	C
	?	31.00	75.25	44.25	2.84	
	including	43.00	58.70	15.70	5.28	
	?	80.47	87.57	7.10	3.42	
	?	99.08	159.00	59.92	2.09	

Drill hole PB-12-08 is located at 474802E, 5055291N (NAD 1983, Zone 18N) with azimuth 102.3° and dip -45°, drill hole PB-12-09 is located at 474841E, 5055586N (NAD 1983, Zone 18N) with azimuth 102° and dip -50.9°.
