

Sierra Iron Ore Corp. Adds More Mineral Titles to the Tom Cat Property in British Columbia

13.12.2012 | [CNW](#)

VANCOUVER, Dec. 13, 2012 - [Sierra Iron Ore Corporation](#) (the "Company") is pleased to announce that it is has successfully staked additional mineral claims adjacent to the Tom Cat property in British Columbia, Canada. With the addition of the newly staked claims, the Tom Cat property is now comprised of ten contiguous mineral claims covering an area of 4013 hectares.

The Tom Cat property is located 200 kilometers east-northeast of Vancouver within the historic Aspen Grove copper camp and shares a property boundary with the Big Kidd property that was recently optioned by Extrata and currently under exploration. The region is well known to host some of the world's largest copper resources including those at Copper Mountain and at the Highland Valley.

The Tom Cat mineral prospect, one of nine MINFILE reported mineral zones on ground covered by the claims of the Tom Cat property, has been explored by prospecting and trenching since 1906. The predominant mineralization is hosted in green laharc breccia or basaltic flow breccia near the contact with red laharc breccia of the Upper Triassic Nicola group.

Garrow (2010) reports that the only significant results reported prior to 2006 was a drill intersection of 45.7 meters of 0.32% copper in a 1965 Pyramid Mining drill hole on the Tom Cat showing. Included in the historic drill hole was an intersection of 4.4 meters of 0.54% copper. Exploration work by Bold Ventures in 2006 & 2007 on the Tom Cat property resulted in the delineation of variable chargeability IP drill targets that may indicate a mineralized sub-surface porphyry system. Sierra has obtained a permit for drilling and will be proceeding with a diamond drilling program to test some of the IP anomalies.

Please note that historic information cannot be relied upon until the information is confirmed through a work program by the company.

Laurence Sookocoff, P Eng, a qualified person (QP) as defined by NI 43-101, has approved the geological content of this press release.

About Sierra Iron Ore

[Sierra Iron Ore](#) is a growth focused mineral exploration company creating value through the exploration and development of the El Creston property located in the Sinoala State of Mexico. The company has a continual fieldwork program at the El Creston Property that is comprised of drilling, mapping, sampling and planning for further property development. Roads have been built and upgraded as well as equipment has been mobilized for further developing the known magnetite zones identified by recent exploration work.

Sierra Iron Ore also has 100% ownership of the Tom Cat property which is located 200 kilometres east-northeast of Vancouver within the historic Aspen Grove copper camp. The company is currently conducting an exploration program of geological mapping and sampling program as a prelude to a planned diamond drill program.

On behalf of The Board of Directors of Sierra Iron Ore Corporation.

Paul Lee
Director
