

Exeter Reports on Drilling at Angeles-Expands Potential of Mineralized Structure

08.07.2013 | [Marketwired](#)

VANCOUVER, BRITISH COLUMBIA--(Marketwired - Jul 8, 2013) - [Exeter Resource Corp.](#) ("Exeter" or "the Company") (TSX:XRC)(NYSE MKT:XRA)(NYSE Amex:XRA)(FRANKFURT:EXB) is pleased to announce additional results from the Company's initial exploration drilling campaign at the Angeles property in northern Sonora state, Mexico.

Since drilling commenced in April, 8 holes have been completed at the La Bonanza zone and 4 at the La Verde zone, 1.1 km to the west of La Bonanza. Recent drill results from La Verde are encouraging, adding additional evidence that the gold/silver/base metal system continues on trend between La Bonanza and La Verde at depth. Surface mineralization at Angeles on the main structure has been identified over a total of 3.0 km of strike length.

Subsequent to previously released drilling at La Bonanza zone, one additional hole, AD13-08, was completed, down dip from holes AD13-03 and AD13-07 (see news release dated May 23, 2013). Highlights of assay results from this hole include:

Hole AD13-08

From	To	Interval (meters)	Au g/t	Ag g/t	AuEq ¹	Cu%	Pb%	Zn%	% Pb-Zn Combined
241.30	244.50	3.20	3.1	15	3.4	0.09	0.20	0.03	0.22
Including									
242.00	243.80	1.80	5.4	18	5.8	0.12	0.28	0.04	0.31

Higher silver values and moderately lower gold and base metal values in the Angeles structure at La Verde, suggests drilling to date at La Verde is within an area of different metal zoning than that encountered in drilling at La Bonanza. Studies designed to vector to higher grade gold zones within the system, are ongoing. Drill hole assay results within the main mineralized structure at La Verde include:

Hole LV-02

From	To	Interval (meters)	Au g/t	Ag g/t	AuEq ¹	Cu%	Pb%	Zn%	% Pb-Zn Combined
114.50	118.80	4.30	0.5	84	2.2	0.45	3.64	0.28	3.92
Including									
114.50	117.20	2.70	0.8	116	3.1	0.25	2.79	0.26	3.05

Hole LV-04

From	To	Interval (meters)	Au g/t	Ag g/t	AuEq ¹	Cu%	Pb%	Zn%	% Pb-Zn Combined
108.80	111.30	2.50	0.7	94	2.5	0.47	0.12	0.16	0.28
Including									
108.80	110.00	1.20	1.1	120	3.5	0.53	0.16	0.18	0.34

Drill hole locations can be viewed on a plan map by [clicking here](#).

Drill hole locations can be viewed on a long section by [clicking here](#).

A complete list of drill hole intercepts can be found by [clicking here.](#)

Drilling recently recommenced at the La Bonanza zone. Additional drilling is designed to test the Angeles mineralized system on 150 m to 200 m step outs along strike (east and west) from previous drilling.

The current program, which is about 70% complete, is part of Exeter's \$1 million committed exploration program at Angeles. The program is largely related to a planned 2,500 m of drilling at the La Bonanza and La Verde target areas, pursuant to an agreement whereby Exeter can earn up to 70% in the Angeles property. For agreement details see Exeter's news release dated March 4, 2013.

Notes:

1. A silver to gold ratio of 50:1 was used for gold equivalent ("AuEq") calculations. Metallurgical recoveries and net smelter returns are assumed to be 100% for these calculations.
2. Drill intervals reported are down hole intercepts. True widths are yet to be determined but are interpreted to range between 75-100%.
3. San Marco Resources is the project operator until Exeter earns an initial 51% interest.
4. Copper, lead and zinc values are not included in AuEq calculations.
5. Drill core recovery of the announced mineralized zones is generally greater than 90%, unless otherwise noted.
6. Drilling is proceeding with HQ drill core unless otherwise noted.
7. Assay intervals were selected using visuals of geology and mineralization, therefore no cut-off grade was used.
8. Drill hole LV-03 did not intersect significant mineralization.

Quality Control and Assurance

Blanks and certified standards were inserted into the sample stream as part of San Marco's quality assurance and control program, which complies with National Instrument 43-101 requirements. Core samples are split using a hydraulic splitter, with one half retained in secure storage for logging, and the other half sent to ALS Chemex Lab in Hermosillo, Sonora, Mexico. All samples are prepared using the PREP -31 method. 125 gram pulps are sent to ALS Chemex Lab. in Vancouver, B.C. A 30 gram split is analyzed for gold, using the Au-AA23 method. Sample results greater than 10 ppm are re-assayed, using AA23 fire assay and gravimetric finish. For silver, copper, lead and zinc, a multi-element, four acid digestion (ME - ICP 61 is used. For initial assays of silver > 100 ppm, copper, lead and zinc > 10,000 ppm (over limits), the OG62 method is used for re-analysis.

Matthew Williams, Exeter's Exploration Manager and a "qualified person" ("QP") within the definition of that term in National Instrument 43-101, *Standards of Disclosure for Mineral Projects*, has verified the technical information that forms the basis for this news release.

About Exeter

Exeter is a Canadian mineral exploration and development company. Its principal focus is the advancement of its 100% owned Caspiche gold-copper project in Chile. Caspiche is one of the largest undeveloped gold-copper deposits in the America's and is situated in the Maricunga gold district, between the Maricunga mine ([Kinross Gold Corp.](#)) and the Cerro Casale gold-copper deposit ([Barrick Gold Corp.](#) and [Kinross Gold Corp.](#)). The Company continues to evaluate new opportunities related to the advancement of Caspiche, and new industry wide opportunities with the objective of securing properties, which offer near term discovery potential.

Exeter has completed pre-feasibility studies that demonstrate the potential for commercializing Caspiche. The Company currently has cash reserves of CAD\$45 million and no debt.

Safe Harbour Statement - This news release contains "forward-looking information" and "forward-looking statements" (together, the "forward-looking statements") within the meaning of applicable securities laws and the United States Private Securities Litigation Reform Act of 1995, including in relation to the Company's belief as to the extent and timing of its drilling programs, various studies including pre-feasibility studies, engineering, environmental, infrastructure and other studies, and exploration results, budgets for its exploration programs, the potential tonnage, grades and content of deposits, timing, establishment and extent of resources estimates, potential for financing its activities, potential production from and viability of its properties, availability of water, power, surface rights and other resources, permitting submission and timing, potential to acquire new projects and expected cash reserves. These forward-looking statements are made as of the date of this news release. Readers are cautioned not to place undue reliance on forward-looking statements, as there can be no assurance that the future circumstances, outcomes or results anticipated in or implied by such forward-looking statements will occur or that plans, intentions or expectations upon which the forward-looking statements are based will occur. While the Company has based these forward-looking statements on its expectations about future events as at the date that such statements were prepared, the statements are not a guarantee that such future events will occur and are subject to risks, uncertainties, assumptions and other factors which could cause events or outcomes to differ materially from those expressed or implied by such forward-looking statements. Such factors and assumptions include, among others, the effects of general economic conditions, the price of gold, silver and copper, changing foreign exchange rates and actions by government authorities, uncertainties associated with negotiations and misjudgments in the course of preparing forward-looking information. In addition, there are known and unknown risk factors which could cause the Company's actual results, performance or achievements to differ materially from any future results, performance or achievements expressed or implied by the forward-looking statements.

Known risk factors include risks associated with project development; including risks associated with the failure to satisfy the requirements of the Company's agreement with Anglo American on its Caspiche project which could result in loss of title; the need for additional financing; operational risks associated with mining and mineral processing; fluctuations in metal prices; title matters; uncertainties and risks related to carrying on business in foreign countries; environmental liability claims and insurance; reliance on key personnel; the potential for conflicts of interest among certain officers, directors or promoters of the Company with certain other projects; the absence of dividends; currency fluctuations; competition; dilution; the volatility of the Company's common share price and volume; tax consequences to U.S. investors; and other risks and uncertainties, including those described in the Company's Annual Information Form for the financial year ended December 31, 2012 dated April 1, 2013 filed with the Canadian Securities Administrators and available at www.sedar.com. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. The Company is under no obligation to update or alter any forward-looking statements except as required under applicable securities laws.

Cautionary Note to United States Investors - The information contained herein and incorporated by reference herein has been prepared in accordance with the requirements of Canadian securities laws, which differ from the requirements of United States securities laws. In particular, the term "resource" does not equate to the term "reserve". The Securities Exchange Commission's (the "SEC") disclosure standards normally do not permit the inclusion of information concerning "measured mineral resources", "indicated mineral resources" or "inferred mineral resources" or other descriptions of the amount of mineralization in

mineral deposits that do not constitute "reserves" by U.S. standards, unless such information is required to be disclosed by the law of the Company's jurisdiction of incorporation or of a jurisdiction in which its securities are traded. U.S. investors should also understand that "inferred mineral resources" have a great amount of uncertainty as to their existence and great uncertainty as to their economic and legal feasibility. Disclosure of "contained ounces" is permitted disclosure under Canadian regulations; however, the SEC normally only permits issuers to report mineralization that does not constitute "reserves" by SEC standards as in place tonnage and grade without reference to unit measures.

NEITHER THE TSX NOR ITS REGULATION SERVICES PROVIDER (AS THAT TERM IS DEFINED IN THE POLICIES OF THE TSX) ACCEPTS RESPONSIBILITY FOR THE ADEQUACY OR ACCURACY OF THIS NEWS RELEASE.
