These six holes were drilled at the southern end of the proposed Main pit outlined in the Technical Report by Agnerian Consultants released on February 5, 2013. A total of 2,250 feet were drilled in the six reverse circulation (RC) holes. All of the holes drilled contained significant mineralized intervals ranging from 40 to 200 feet of +0.01 oz/ton gold equivalent (Au Equiv.).

Scott Jenkins, Director of Exploration and Chief Geologist commented on the first batch of 2013 drilling results that "These holes drilled out spaces in the proposed pit area and at the edge of the proposed pit. Significantly, Hole LS-1303 showed the structure continues to the south toward the Opal Ridge fault. The full extent of this is not yet known. Also noteworthy was that LS-1305 extended the disseminated gold structure deeper than previous shallow drilling had shown."
