

# Alamos Receives Final Signatures Approving Kirazli EIA

12.08.2013 | [Marketwired](#)

**All amounts are in United States dollars, unless otherwise stated.**

TORONTO, ONTARIO--(Marketwired - Aug 12, 2013) - **Alamos Gold Inc. (TSX:AGI)(NYSE:AGI)** ("Alamos" or the "Company") today reported that it has received the final signatures approving the Environmental Impact Assessment ("EIA") for its Kirazli gold project.

The Ministry of the Environment and Urbanization, the Turkish government agency responsible for reviewing the Company's EIA, has signed and issued formal approval in the form of an EIA Positive Decision Certificate for Kirazli. "We are very pleased to have achieved this milestone. The EIA approval process is a very thorough and rigorous process that goes beyond the environmental impact to also consider the social impact of development. This achievement reflects our commitment to operating in accordance with the highest environmental and social standards. Kirazli will be Turkey's next gold mine. We look forward to advancing it over the next 18 months with initial production expected in the first half of 2015," said John A. McCluskey, President and Chief Executive Officer.

Additionally, the EIA on the A&#287;i Da&#287;i project has progressed to the final stage of the approval process. The EIA Commission has reviewed the submission for A&#287;i Da&#287;i and found the EIA sufficient and accepted it as final. The Company has also been informed that a subsequent mandatory 10-day public notice period produced no opposition or comments of any kind. Final approval of the A&#287;i Da&#287;i EIA is anticipated in a similar time frame as was achieved with Kirazli. With approximately \$475m in cash, no debt and strong ongoing cash flow generation, the Company expects to fund development of these projects internally.

## About Alamos

Alamos is an established Canadian-based gold producer that owns and operates the Mulatos Mine in Mexico, and has exploration and development activities in Mexico and Turkey. The Company employs more than 600 people and is committed to the highest standards of environmental management, social responsibility, and health and safety for its employees and neighbouring communities. Alamos has approximately \$475 million in cash and cash equivalents, is debt-free, and unhedged to the price of gold. As of July 23, 2013, Alamos had 127,348,988 common shares outstanding (132,413,188 shares fully diluted), which are traded on the TSX and NYSE under the symbol "AGI".

## Cautionary Note

No stock exchange, securities commission or other regulatory authority has approved or disapproved the information contained herein. This News Release includes certain "forward-looking statements". All statements other than statements of historical fact included in this release, including without limitation

statements regarding forecast gold production, gold grades, recoveries, waste-to-ore ratios, total cash costs, potential mineralization and reserves, exploration results, and future plans and objectives of Alamos, are forward-looking statements that involve various risks and uncertainties. These forward-looking statements include, but are not limited to, statements with respect to mining and processing of mined ore, achieving projected recovery rates, anticipated production rates and mine life, operating efficiencies, costs and expenditures, changes in mineral resources and conversion of mineral resources to proven and probable reserves, and other information that is based on forecasts of future operational or financial results, estimates of amounts not yet determinable and assumptions of management.

Exploration results that include geophysics, sampling, and drill results on wide spacings may not be indicative of the occurrence of a mineral deposit. Such results do not provide assurance that further work will establish sufficient grade, continuity, metallurgical characteristics and economic potential to be classed as a category of mineral resource. A mineral resource that is classified as "inferred" or "indicated" has a great amount of uncertainty as to its existence and economic and legal feasibility. It cannot be assumed that any or part of an "indicated mineral resource" or "inferred mineral resource" will ever be upgraded to a higher category of resource. Investors are cautioned not to assume that all or any part of mineral deposits in these categories will ever be converted into proven and probable reserves.

Any statements that express or involve discussions with respect to predictions, expectations, beliefs, plans, projections, objectives, assumptions or future events or performance (often, but not always, using words or phrases such as "expects" or "does not expect", "is expected", "anticipates" or "does not anticipate", "plans", "estimates" or "intends", or stating that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved) are not statements of historical fact and may be "forward-looking statements." Forward-looking statements are subject to a variety of risks and uncertainties that could cause actual events or results to differ from those reflected in the forward-looking statements.

There can be no assurance that forward-looking statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Important factors that could cause actual results to differ materially from Alamos' expectations include, among others, risks related to international operations, the actual results of current exploration activities, conclusions of economic evaluations and changes in project parameters as plans continue to be refined as well as future prices of gold and silver, as well as those factors discussed in the section entitled "Risk Factors" in Alamos' Annual Information Form. Although Alamos has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements.

### **Note to U.S. Investors**

Alamos prepares its disclosure in accordance with the requirements of securities laws in effect in Canada, which differ from the requirements of U.S. securities laws. Terms relating to mineral resources in this presentation are defined in accordance with National Instrument 43-101 - Standards of Disclosure for Mineral Projects under the guidelines set out in the Canadian Institute of Mining, Metallurgy, and Petroleum Standards on Mineral Resources and Mineral Reserves. The United States Securities and Exchange Commission (the "SEC") permits mining companies, in their filings with the SEC, to disclose only those mineral deposits that a company can economically and legally extract or produce. Alamos may use certain terms, such as "measured mineral resources", "indicated mineral resources", "inferred mineral resources" and "probable mineral reserves" that the SEC does not recognize (these terms may be used in this presentation and are included in the public filings of Alamos, which have been filed with the SEC and the securities commissions or similar authorities in Canada).
