

Glen Eagle Resources Reports Strong Gold, Silver, and Mercury Assays from the La Libertad/ Santo Domingo Tailings Project, Nicaragua.

03.09.2013 | [The Newswire](#)

[Glen Eagle Resources Inc.](#) (Montreal, QC, September 3rd, 2013; TSX VENTURE EXCHANGE: GER) ("Glen Eagle" or the "Company") is pleased to announce assay results from auger hole sampling in the villages of La Libertad, Chontales, Nicaragua and Santo Domingo, Chontales, Nicaragua. A total of 32 Areas were examined with an auger sampling program incorporating 93 separate auger holes. The ten areas herein described incorporate a total of 39 of these auger holes. The auger program was designed to study the occurrence of free gold and silver as well as gold contained in mercury left in the tailings as a result using mercury to absorb free gold in the processing methodology in use in La Libertad and Santo Domingo.

* *Depths indicated are the minimum thickness of tailings piles*

Areas 1 to 29 are individuals owning lots in or close to La Libertad where tailings are found in discrete quantities. The number of auger holes varies per area, and depends on the lateral and vertical extent of tailings that can be easily sampled and for which a hole spacing of at least five metres is possible. Areas 30 to 32 are in or close to the village of Santo Domingo. Data for the remaining 10 areas, incorporating the remaining 28 drill holes, is awaited, and will be released when received and analyzed.

Samples were transported from the secure storage facility in La Libertad to the ISO/IEC 17025- accredited Bureau Veritas preparation lab in Managua, Nicaragua by the QP. Pulps were sent to Bureau Veritas Acme Laboratories Inc in Vancouver, British Columbia for Aqua Regia digestion followed by assay using IF30 Ultratrace ICP MS on a 30g split.
