

Rockhaven Resources Ltd. Discovers New Gold-Silver Zone Grading 28.2 g/t Gold and 359 g/t Silver (35.38 g/t Gold EQ) Over 1.20 m-Klaza Project, Yukon

03.10.2013 | [Marketwired](#)

VANCOUVER, BRITISH COLUMBIA -- (Marketwired - Oct. 3, 2013) - [Rockhaven Resources Ltd.](#) (TSX VENTURE:RK) ("Rockhaven") is pleased to announce additional results from the 2013 exploration program at the eastern portion of its 100% owned Klaza gold-silver property, located in the Dawson Gold Belt of southwestern Yukon.

News Release Highlights:

- A new high-grade gold discovery made at the Pearl Zone in two widely spaced trenches that returned 28.2 g/t gold and 359 g/t silver (35.38 g/t gold EQ) over 1.20 m and 19.75 g/t gold and 148 g/t silver (22.71 g/t gold EQ) over 1.25 m; and,
- The 2013 trenching has nearly doubled the size of the known mineralized structural corridor on the Klaza property from 2.4 km to 4 km in length and from 1.8 km to 2 km in width.

"Excavator trenching within the recently purchased eastern portion of the Klaza property resulted in new high-grade vein exposures and has substantially expanded the target area," stated Matt Turner, CEO of Rockhaven. "Results from the remaining 22 trenches of the 2013 program, which tested the high grade BRX Zone, will be released once assays have been compiled."

Pearl Zone

The newly discovered Pearl Zone is the ninth and most northerly mineralized structure identified at the Klaza property. It was identified by two excavator trench exposures grading 28.2 g/t gold and 359 g/t silver (35.38 g/t gold EQ) over 1.20 m and 19.75 g/t gold and 148 g/t silver (22.71 g/t gold EQ) over 1.25 m. These exposures are located 450 m apart and occur along a topographic linear that marks a strongly oxidized vein. Detailed follow-up trenching and drilling are planned for 2014 to fully evaluate this new high-grade gold and silver discovery, which is open to extension along strike in both directions.

Eastern Klaza and Far Eastern Klaza Zones

Excavator trenching has increased the known strike length of the Klaza Zone to 3,700 m. The Eastern and Far Eastern Klaza Zones are located proximal to the Mount Nansen Porphyry Complex, the intrusive body that is thought to have been the main hydrothermal driver for the mineralized system at the Klaza property. Mineralization within these areas has lower silver to gold ratios than the veins to the Western and Central Klaza Zones and is locally elevated in copper and molybdenum. The Eastern and Far Eastern Klaza Zones are characterized by sheeted vein complexes and surrounding alteration envelopes, which coalesce to form a series of 10 to 100 m thick mineralized bands. Four, widely spaced trenches were completed in 2013 to test the Eastern and Far Eastern Zones. TR-13-42 returned 0.69 g/t gold and 3.43 g/t silver (0.75 g/t gold EQ) over 53.95 m while TR-13-40EXT averaged 0.84 g/t gold and 4.01 g/t silver (0.91 g/t gold EQ) over 18.65 m.

Chevron Zone

Excavator trenching within the southeastern portion of the Klaza property also identified the eastern extension of the Chevron Zone, located 1,300 m to the south of the Eastern Klaza Zone. TR-13-46 returned 1.35 g/t gold and 12.60 g/t silver (1.60 g/t gold EQ) over 13.07 m, including 2.26 g/t gold and 22.34 g/t silver (2.70 g/t gold EQ) over 5.98 m. The showing is associated with a coincident linear magnetic low and an elevated multi-element soil geochemical anomaly which is typical of other mineralized structures identified at

the Klaza property. The Chevron Zone has an inferred length of 2,000 m and remains open along strike in both directions.

A total of ten excavator trenches tested targets in this eastern part of the Klaza property in 2013, and the most significant assay results are shown in the table below. Maps showing the locations of the trenches can be viewed on Rockhaven's website at www.rockhavenresources.com.

Trench ID	Zone ID	From (m)	To (m)	Interval (m) ^o	Gold (g/t)	Silver (g/t)	Gold EQ*

^o Represents the excavator trench sample length. True widths are estimated to be approximately 70-90% of the interval, except the initial 350 m of TR-53 where true width is estimated to be approximately 25% of the interval.

* Gold equivalence has been calculated using metal prices of \$1300 per ounce gold and \$26.00 per ounce silver, to be consistent with earlier calculations. It assumes 100% recoveries.

2013 Exploration Program

Rockhaven's 2013 exploration program at its road-accessible Klaza project consisted of approximately 5,000 m of excavator trenching in 38 trenches that focused on extending and confirming continuity within the Klaza and BRX Zones as well as discovering new mineralized zones in other areas of the property that had not

previously been systematically explored. Results from the remaining 22 trenches that tested the Central and Western BRX Zones will be released once assays are received, compiled and evaluated. Additionally, metallurgical test work on samples from the BRX and Eastern Klaza Zones is underway and results will be announced once finalized.

All significant assays from 2010, 2011, 2012 and 2013 diamond drilling and excavator trenching can be viewed on the Company's website (www.rockhavenresources.com), including geological maps, cross-sections and assay histograms.

Trench samples included in this press release were processed in 36 sample batches with each batch including one assay standard and one blank sample. Analytical work was done by ALS Minerals with sample preparation in Whitehorse and assays and geochemical analyses in North Vancouver. All samples were routinely analyzed for gold by fire assay followed by atomic absorption (Au-AA24) and 48 other elements by four acid digestion (ME-MS61). All overlimit values were determined for gold by fire assay and gravimetric finish (Au-GRA22) and for silver using Ag-OG46 and Ag-GRA21). All gold and silver grades reported in this release were calculated from the assay results. All standards and blanks passed QAQC reviews.

The 2013 program was managed by Archer, Cathro & Associates (1981) Limited (Archer Cathro). Technical information in this news release has been approved by Matthew R. Dumala, P.Eng., a geological engineer with Archer Cathro and qualified person for the purpose of National Instrument 43-101.

Rockhaven Resources Ltd. is a well-managed gold and silver exploration company focused on growth through advancing its quality portfolio of wholly-owned projects. For additional information concerning Rockhaven Resources Ltd. or its various exploration projects please visit Rockhaven's website at www.rockhavenresources.com.

NEITHER THE TSX VENTURE EXCHANGE NOR ITS REGULATION SERVICES PROVIDER (AS THAT TERM IS DEFINED IN THE POLICIES OF THE TSX VENTURE EXCHANGE) ACCEPTS RESPONSIBILITY FOR THE ADEQUACY OR ACCURACY OF THIS RELEASE.
