Deutsche Rohstoff: Rhein Petroleum announces successful exploratory oil drilling
Successful redevelopment of former oil field Stockstadt in Hesse

Heidelberg. Rhein Petroleum GmbH, Heidelberg, announced today, that drilling of their first oil well in Riedstadt-Crumstadt was successful, which means it reached oil-bearing layers. Riedstadt-Crumstadt is located about 50 kilometers south of Frankfurt am Main. The exploratory drilling ended -as planned- in the so-called 'Pechelbronner layers'. This drilling target was defined as promising as a result of the extensive seismic studies of Rhein Petroleum. It is located within the former oil field 'Stockstadt', where oil was being produced until 1994. Not yet detected structures were identified in the surroundings of this former oil field, which shall also be drilled. For this purpose, the next oil well called 'Allmend 1' will be drilled from the same drilling pad starting within the next few days. Test production for both wells is scheduled for January 2014. The complete press release can be found at www.rheinpetroleum.de.

Deutsche Rohstoff, who co-founded Rhein Petroleum in late 2007 to redevelop old oil fields in Southern Germany, still holds 10% of the company. The remaining shares are held by Tulip Oil (www.tulipoil.com), The Hague, Netherlands. Deutsche Rohstoff sold the majority of Rhein Petroleum to Tulip in January 2011. Due to an agreement signed in September 2012, Deutsche Rohstoff pays for just 2.5% of all investments of Rhein Petroleum despite its 10% share.

Heidelberg, 7 November 2013

Deutsche Rohstoff (Heidelberg, Germany), listed in the Entry Standard segment of Frankfurt Stock Exchange, is establishing a new primary producer. The company's focus is placed on oil & gas and so called high tech metals such as tin, tungsten, and rare earth metals. All projects are located in political stable countries with high environmental standards. The business concept is based on redeveloping deposits, which have been well explored in the past.
