

# New World's Joint Venture Partner, MARTE, Advances Underground Exploration at the Lipena Copper-Gold Project

30.10.2013 | [Marketwired](#)

VANCOUVER, Oct. 30, 2013 - [New World Resource Corp.](#) (TSX VENTURE:NW) (FRANKFURT:NWU) ("New World" or the "Company") announces an update on the underground exploration program at the Lipeña copper-gold project ("Lipeña" or the "Project") in southern Bolivia with Empresa Minera Marte S.R.L. ("MARTE"). MARTE constructed adits and commenced underground exploration on two levels; Level 0 and Level 40, which is 40 metres above Level 0. MARTE intersected mineralization on Level 0 and expects to reach known mineralization on Level 40 within the coming weeks.

MARTE is a partner with New World and pursuant to the amended option agreement (reported October 11, 2012), MARTE has been granted an option to acquire 20% of the Company's 57.6% interest in Lipeña by spending US\$1,250,000 in mineral exploration expenditures on the Project over a period of 12 months. Upon completion of the transaction, MARTE will hold 62.4% and New World will hold 37.6%.

MARTE constructed underground adits to establish access into a known structure to obtain samples for metallurgical testing and bulk samples (reported December 11, 2012). Historical assays from rotary drilling carried out in 1995 by a subsidiary of the former Battle Mountain Gold Company outline that a structure containing high-grade silver was discovered. Historical rotary drill hole LP-04 contained 1,253 grams per tonne ("g/t") silver over 6 metres, which included 3,900 g/t silver over 1.5 metres. The high-grade silver structure appears continuous to surface with a series of veins and veinlets sampled ranging in thickness from 0.1 to 1.5 metres. Historical drill results were analyzed at Laboratorio de Exploración Inti Raymi, Bolivia.

The historical drill results were prepared prior to the implementation of NI 43-101. The Company is not aware of any subsequent drill results at this location and there has not yet been sufficient work completed to confirm the accuracy of the historical results.

At the Level 0 adit, MARTE intersected a shear zone averaging 10.5 metres in thickness. A composite sample across the zone returned values of 150 g/t silver, 4.2% copper, 2.1% zinc, 0.5% lead and 0.8% antimony. A 0.9 metre vein parallel to the shear zone returned values of 148 g/t silver, 5.4% copper, 2.4% zinc, 0.6% lead and 1.5% antimony.

MARTE plans to continue collecting samples for metallurgical testing and to evaluate its different options for the further evaluation and exploration work at Lipeña.

The Company also announces that it continues to negotiate with Sociedad Contractual Minera in relation to the El Tesoro copper-gold project (reported February 25, 2013).

Exploration work on the Lipeña project is under the supervision of Brian McEwen, P.Geol., B.Sc. (Geo), the Company's Chief Operating Officer, who is a "qualified person", as defined in NI 43 101, and is responsible for the preparation of the technical information contained in this news release.

The intra-lab standards, blanks and replicates were augmented by unmarked replicates and by aliquots of two geological standards acquired by New World. Unmarked checks (standards and duplicates) were inserted into the numbered sample sequence, and represents approximately 5% of the total samples. Under the supervision of the project geologist, sample bags were sealed and stored, pending secured transport for analysis. Samples were submitted to an ALS Minerals Ltd. preparatory laboratory (Oruro Minerals Lab) located in Oruro, Bolivia where they were crushed, split and pulverized. ALS Minerals then shipped the pulps to their analytical laboratory (Lima Minerals Lab) located in Lima, Peru where the samples underwent a four acid digestion followed by analysis of 33 elements using an ICP mass spectrometer. Samples with contents above the detection limit additionally were digested with aqua regia and assayed by Atomic Absorption Spectrometry. The Lima preparatory and analytical laboratories are accredited ISO 9001: 2008 and ISO 17025.

## About New World

New World Resource Corp. is a Canadian based exploration company focused on building a strong,

diversified project portfolio within the Americas. The Company's projects include the Lipeña/Bonete copper-gold project and the Pastos Grandes lithium brine project in Bolivia.

*This news release includes "forward-looking information", as such term is defined in applicable securities laws. The forward-looking information includes, without limitation, the success of exploration activities and other anticipated future events, conditions or results that are not historical facts. This forward-looking information is given as of the date of this news release. Users of forward-looking information are cautioned that actual results may vary from the forward-looking information contained herein. While the Company has based this forward-looking information on its expectations about future events as at the date that such information was prepared, the information is not a guarantee of the Company's future performance and is subject to risks, uncertainties, assumptions and other factors which could cause actual results to differ materially from future results expressed or implied by such forward-looking information. Such factors and assumptions include, amongst others, the effects of general economic conditions, changing foreign exchange rates, actions by government authorities, uncertainties associated with legal proceedings and negotiations and misjudgments in the course of preparing forward-looking information. In addition, there are also known and unknown risk factors which could cause the Company's actual results, performance or achievements to differ materially from any future results, performance or achievements expressed or implied by the forward-looking information. Known risk factors include, among others, risks relating to exploration and development; the ability of the Company to obtain additional financing; including through MARTE funding exploration and development activities pursuant to the option agreement; the Company's limited operating history; the need to comply with environmental and governmental regulations; political and economic instability and general civil unrest in Bolivia; potential defects in title to the properties; fluctuations in currency exchange rates; fluctuating prices of commodities; operating hazards and risks; competition; and other risks and uncertainties. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking information, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking information. The Company is under no obligation to update or alter any forward-looking information except as required under applicable securities laws.*

**NEITHER THE TSX VENTURE EXCHANGE NOR ITS REGULATION SERVICES PROVIDER (AS THAT TERM IS DEFINED IN THE POLICIES OF THE TSX VENTURE EXCHANGE) ACCEPTS RESPONSIBILITY FOR THE ADEQUACY OR ACCURACY OF THIS NEWS RELEASE.**
