

TomaGold Announces the Start of Exploration Work on Monster Lake by IAMGOLD

05.02.2014 | [Marketwired](#)

MONTREAL, QUEBEC--(Marketwired - Feb 5, 2014) - **TOMAGOLD CORPORATION (TSX VENTURE:LOT)** ("TomaGold" or the "Company") is pleased to announce the start of work on the Monster Lake property, 50 km southwest of Chibougamau, Quebec, pursuant to an agreement that calls for [IAMGold Corp.](#) to spend at least \$2 million on exploration on the Monster Lake property in Year 1.

The first phase of work, which begins this week, consists of a high-resolution magnetic survey, to be followed by an initial program of at least 6,000 metres of drilling.

The high resolution airborne magnetic survey will be flown over lines spaced at 75 metres, at an average altitude of 45 metres. This high resolution survey will be the first one to be completed on the entire properties and could reveal structural elements that play a key role in gold mineralization. The survey will cover the Monster Lake, Winchester and Lac-à-l'Eau-Jaune properties, which are all part of the joint venture agreement signed in November 2013. TomaGold will also fund part of the survey to cover the Little Monster and Cookie Monster properties acquired in 2013, which lie just east of Monster Lake. A total of about 2,050 line-km will need to be flown.

A concurrent initial drilling program of at least 6,000 metres of drilling will begin in the second half of February 2014 in the areas of the 325 and Mégane zones. The 325 zone returned excellent results from drilling by TomaGold in 2010, 2011 and particularly winter 2013, as shown in the following table:

Hole (#)	From (m)	To (m)	g/t Au	Length (m)	Depth (m)
Section 1100 E					
M-25-11	49.50	54.00	101.2	4.50	40

"We are very pleased to announce the start of this work," said David Grondin, President and CEO of TomaGold. "The drilling program targets zones that have already returned excellent results. We feel that

IAMGOLD's help and the work to be done over the next few months will lead to a better understanding of the gold potential of our properties."

Note that the drill core intersects the sheared tuff unit hosting the gold-bearing quartz vein at an angle of 40-50°, meaning that the intersected width is not necessarily the true width of the zone. Based on observations on surface from recent trenching and old SOQUEM and Stellar Pacific Ventures drillholes, the Company estimates the true width at 70-85% of the core length.

André Jean, Ing., Geo., a qualified person under National Instrument 43-101, has reviewed and approved the technical content of this press release.

About TomaGold Corporation

[TomaGold Corp.](#) is a Canadian-based mining exploration company whose primary mission is the acquisition, exploration and development of gold projects in Canada and abroad.
