

Klondex Mines Infill Drilling Extends Joyce and Vonnie Veins at Fire Creek

13.02.2014 | [Marketwired](#)

-- 166.0 g/t (4.8 opt) Au over 1.52 m (5.0 ft) - FC-13-99U

-- 47.5 g/t (1.4 opt) Au over 2.50 m (8.2 ft) - FC-13-104U

-- 146.2 g/t (4.3 opt) Au over 1.92 m (6.3 ft) - FC-13-106U

-- 69.6 g/t (2.0 opt) Au over 1.52 m (5.0 ft) - FC-13-107U

VANCOUVER, BRITISH COLUMBIA--(Marketwired - Feb 13, 2014) - [Klondex Mines Ltd.](#) (TSX:KDX)(OTCQX:KLNDF), a gold exploration and development company, today provides an update on recent underground infill and exploration drilling from its Fire Creek gold project near Elko, Nevada. A total of seventeen drill holes were drilled to the east of the main decline from Muck Bay (MB) 6 and Diamond Drill Station (DDS) 6 and 17 ([See FIGURE 1](#)).

Drilling east from MB6, designed to test the northern extension of the Vonnie vein, intersected the Vonnie structure in all five holes of the fan. The lower two holes successfully extended mineralization at depth, from 42.7 m (140 ft) to 96 m (315 ft) below the current workings. The location of mineralization intersected in these holes is consistent with the known geometry of mineralization along the Vonnie vein. The upper three holes did not encounter mineralization above the cut-off grade of 5 g/t (0.15 opt) Au.

Drilling east from DDS-17 continues to demonstrate continuity of mineralization along the Joyce vein. Drill intercepts on the Joyce vein extended mineralization north by 61 m (200 ft) along strike of the current underground development, and by 27 m (90 ft) down dip and 46 m (150 ft) up dip. FC-13-107U identified one new mineralized structure northeast of the Vonnie vein, continuing to support and demonstrate the potential for finding additional mineralization within the Fire Creek property. Drilling encountered the Vonnie structure, but did not locate mineralization above the cut-off grades. Klondex will continue testing the northern extensions of the veins, by extending the main decline to the northwest to establish additional drill platforms.

Infill fan drilling from DDS 6 extended the Joyce and the Vonnie vein mineralization, slightly updip and downdip. Additional fan drilling is currently underway in DDS 6. Assays are pending.

Mike Doolin, Klondex General Manager stated, "Our drilling program continues to impress us as we have intersected several new areas of gold and silver mineralization. This continues to support our geologic model that there is a strong likelihood to encounter additional subparallel veins within the East and West zones. Our planned infill and exploration drill programs for 2014 will be expanded in all directions in an effort to increase the current known mineral resources at Fire Creek."

The technical information contained in this press release has been reviewed and approved by Mark Odell of Practical Mining LLC, an Independent Qualified Person (Nevada PE 13708 and SME 2402150) for the purposes of National Instrument 43-101. - See more at: <http://klondexmines.com/s/news>.

Assays were performed by SGS Minerals Services of Elko, Nevada (an independent laboratory), under the supervision of Klondex staff. For additional sampling parameters, please see the press release dated [September 30, 2013](#).

About Klondex Mines Ltd. (www.klondexmines.com)

Klondex Mines is focused on the exploration, development and production of its high quality gold and silver projects. The company is operating an ongoing bulk sampling program at its Fire Creek gold project located in north central Nevada. Fire Creek is in a mining-friendly jurisdiction, with onsite power and mining infrastructure, and near major producers. Midas, Klondex' newly acquired operating mine and milling facility are located 112 miles north of Fire Creek.

Forward-looking statements

This news release contains certain information that may constitute forward-looking information under applicable Canadian securities legislation, including information about the magnitude and quality of the Fire Creek Project and the results of exploration at the Fire Creek Project. This forward-looking information entails various risks and uncertainties are based on current expectations, and actual results may differ materially from those contained in such information. These risks and uncertainties include, but are not limited to the risks and hazards associated with environmental compliance and permitting for its underground operations, the strength of the global economy; the price of gold; operational, funding and liquidity risks; the degree to which mineral resource estimates are reflective of actual mineral resources; the degree to which factors which would make a mineral deposit commercially viable are present. Risks and uncertainties about the Company's business are more fully discussed in the Company's disclosure materials filed with the securities regulatory authorities in Canada and available at www.sedar.com. Readers are urged to read these materials. Klondex assumes no obligation to update any forward-looking information or to update the reasons why actual results could differ from such information unless required by law.
