VANCOUVER, BRITISH COLUMBIA--(Marketwired - Mar 17, 2014) - [Scorpio Gold Corp.](#) ("Scorpio Gold" or the "Company") (TSX VENTURE SGN) reports additional results from its 2013 satellite deposit drilling program at the 70% owned Mineral Ridge project, located in Nevada. The Bluelite deposit lies west of the currently producing Drinkwater and Mary pits and 400 meters northwest of the leach pad.

The 2013 satellite drilling program was designed to upgrade and potentially increase the mineral resource estimate completed by Telesto Nevada Inc. ("Telesto") for a number of satellite deposits including Bluelite, which was reported in the Company's August 16, 2013 news release. Final results from the 2013 drilling on the Bluelite deposit have added to an overall successful program, returning significant intercepts both within and extending outside of the floating cone pit shells modelled by Telesto. Results from continuation of the satellite deposit drilling program in 2014 will be released as received and compiled.

Previous results from earlier phases of expansion drilling on the Bluelite deposit were reported in the Company's November 10, 2013, November 20, 2013 and December 16, 2013 news releases. Highlights of the final results received for the 2013 drilling at Bluelite include:

- MR13774: 1.09 grams per tonne ("g/t") gold over 4.57 meters
- MR13775: 2.76 g/t gold over 7.62 meters

All holes presented in Table 1 were completed by reverse circulation (RC) drilling. True width is estimated at 90-100% of downhole width. Analytical results were performed by American Assay Laboratory Inc. in Sparks, Nevada, an ISO/IEC 17025:2005 accredited facility. External check assays to verify lab accuracy are routinely completed by ALS Chemex, an ISO 9001:2000 certified and ISO/IEC 17025:2005 accredited facility.
