

Adamera Minerals Update - Drilling Commenced at Empire Creek

13.06.2014 | [The Newswire](#)

Vancouver, BC / TNW-ACCESSWIRE / June 13, 2014 - [Adamera Minerals Corp.](#) (TSX V: ADZ) announces drilling has commenced on the Empire Creek property. The program is focused in an area with several historic drill holes and recent trenches that encountered significant gold mineralization. Two of three drill holes have been completed. A third drill hole is currently underway. Any significant results from this program will be released.

Original historic drilling on the property appears to have targeted flat-lying mineralization. Work by Adamera suggests a different geological model with high-grade gold mineralization along several vertical to near vertical zones.

"The objective of this program is to determine control and orientation of the gold mineralized zones. With only 3 drill holes we are not attempting to test the entire property, we are simply testing an idea. Once this has been determined and further drilling is warranted, we will continue with a second drill program along strike and on several areas with similar characteristics," says Mark Kolebaba President and CEO of [Adamera Minerals Corp.](#)

On the basis of prospecting and soil geochemistry the zones appear to extend for more than 500 metres along strike.

Other Business

The Company's AGM was held on June 10, 2014. During the meeting all resolutions were passed including the re-election of all directors.

About Adamera

Adamera is exploring for high-grade gold near an operating mill in Washington State owned by [Kinross Gold Corp.](#) The mill is reported to be operating at half capacity with ore shipped 70 kilometres from the 1.3 million ounce Buckhorn mine. The Buckhorn mine is a high grade, low-cost producer with only 2 years mine life remaining. Adamera is currently exploring five projects with high-grade gold potential within hauling distance of the Mill.

On behalf of the Board of Directors,

Mark Kolebaba

President & CEO
