Drill core processing included descriptive logging and sampling for geochemical analyses. The NQ-size drill

core was cut/split in two halves using saws at the Company's Lowhee Creek Compound in Wells-Barkerville, central B.C. One-half of the core is put in a sample bag. After all the samples are placed in the rice bags at the mine site, they are transported by BGM's personnel to a shipping company in Quesnel for trans-shipment to ACME Analytical Laboratories Ltd. in Vancouver, which is under the Bureau Veritas Group Company, for analysis. Sample preparation and geochemical assaying is done at ACME, following their own internal standards for quality control and verification. The gold assaying method uses a 1,000 gram metallic screen gold assay and 50 gram lead collection fire assay. ACME is certified under the Assayers Certification Program of B.C.
