

# Axe Exploration Announces the Publication of the NI 43-101 Technical Report on Gold Peak Property

25.02.2015 | [Marketwired](#)

LAVAL, CANADA--(Marketwired - Feb 25, 2015) - **Axe Exploration Inc.** (TSX VENTURE:AXQ) (the "**Corporation**") is pleased to announce that the publication of the NI 43-101 Technical Report on Gold Peak Property is now available on Sedar ([www.sedar.com](http://www.sedar.com)) and on Axe website ([www.axeexploration.com](http://www.axeexploration.com))

During Autumn 2014, prospection and channel sampling works were completed on manually stripped outcrops corresponding to Induced Polarization (IP) anomalies (Dipôle-Dipôle Orevision Method). The outcropping host rock units consist of the Lac Caste sedimentary Formation which locally contains graphitic zones. Several thin intrusions of dioritic to tonalitic composition cut the main sedimentary rock unit.

The graphitic horizons generally coincide with the strongest IP anomalies and are associated with 2-5% pyrite and traces to 1% chalcopyrite. Samples P225812 and P225813 respectively returned the following significant results: 0.25% Zn, 0.04% Cu and 0.50 g/t Ag as well as 0.16% Zn, 0.02% Cu and 0.30 g/t Ag.

The Gold Peak Property is underlain by major structural metallotects, is strategically well located with respect to several proximal precious and base metals occurrences, past producers and local deposits or showings (Fayolle, McCormack, Dunn, Dean-Mcdermott, Mobrun, Kerwin etc.).

The Ni 43-101 Report summarizes all the past exploration efforts that were completed on the Gold Peak Property up to now as well as future work recommendations distributed over a two phases exploration work program.

## QUALIFIED PERSON

M. Daniel Gaudreault, P. Eng., Geo, (OIQ) of Geologica Inc. is the qualified person in accordance with the National Instrument 43-101 rules and has verified the technical content of this press release.
