

Kennedy Diamonds Intersects 37 meters of Kimberlite at Faraday

24.03.2015 | [CNW](#)

Shares Issued and Outstanding: 28,633,122
TSX-V: KDI

TORONTO, March 24, 2015 /CNW/ - [Kennedy Diamonds Inc.](#) ("Kennedy Diamonds", the "Company") (TSX-V: KDI) is pleased to announce that kimberlite has been intersected over 37 meters in delineation drill hole KDI-15-004a located approx. 30 meters northwest of the discovery holes at Faraday 2.

Kennedy Diamonds CEO Patrick Evans commented: "This is an exciting development. Drill results from the first four delineation holes at Faraday 2 indicate that the kimberlite is trending on strike to the northwest. We're also very encouraged by the widths of the intersections. We plan to continue testing the continuity of Faraday 2 further to the northwest and will also test for continuity to the southeast of the discovery holes."

Table 1 below provides details of latest Faraday 2 drill results.

Table 1
Faraday 2015 Spring Drill Program

Drill Hole	Target	Azimuth	Inclination	Kimberlite Intercepts (m)			End of Hole (m)	
				Approximate				
				From	To	Intercept**		
KDI-15-002b	Faraday 2	055	-62	50.70	81.44*	18.76	151	
KDI-15-003	Faraday 2	070	-47	40.70	75.80	35.10	130	
KDI-15-004a	Faraday 2	055	-45	52.10	89.10	37.00	139	

*Includes minor country rock intercepts

**Intercepts in sub-vertical holes not true widths

Up to the end of 2014 Kennedy Diamonds had recovered approx. 1 tonne of kimberlite from Faraday by drilling. Processing of Faraday core samples by caustic fusion at the Geoanalytical Laboratories Diamond Services of the Saskatchewan Research Council ("SRC") yielded 4.76 carats greater than 0.85mm with a resultant "commercial" sample grade of 4.54 carats per tonne.

Kennedy Diamonds is also pleased to report that good progress continues to be made with the bulk sampling of the Kelvin – Faraday kimberlite. The bulk sample is being recovered using two large diameter reverse-circulation drill rigs. Approximately 300 tonnes of kimberlite has so far been recovered, most of which has already been delivered to the SRC.

About Kennedy Diamonds

[Kennedy Diamonds Inc.](#) controls 100 percent of the Kennedy North project which comprises thirteen leases and claims located immediately to the north and west of the four leases controlled by the Gahcho Kué Joint Venture between De Beers Canada (51%) and Mountain Province (49%) located in Canada's Northwest Territories.

Kennedy Diamonds aims to identify a resource along the Kelvin – Faraday kimberlite corridor of between a 10 and 13 million carat diamondiferous kimberlite pipe.

tonnes at a grade of between 2 and 2.5 carats per tonne and also to identify new kimberlites outside of the corridor. The Faraday corridor is a target for further exploration. The tonnage estimate is based on the drilling completed to date. The quantity is conceptual in nature as there has been insufficient drilling to define a mineral resource and it is uncertain if further exploration will result in the target being delineated as a mineral resource.

Qualified Person

This news release has been prepared under the supervision of Carl G. Verley, P.Geo., who serves as the qualified person under National Instrument 43-101.
