

VANCOUVER, BRITISH COLUMBIA--(Marketwired - Apr 9, 2015) - [Minaurum Gold Inc.](#) ("Minaurum") (TSX VENTURE:MGG) is pleased to announce that it has received drill permits from The Ministry of Environment and Natural Resources (SEMERNAT) for the Vuelcos del Destino Project located in the Guerrero Gold Belt ("GGB") in the state of Guerrero, Mexico.

A 10,000 meter drill program will test a primary central target and four peripheral targets. The drill plan was designed by Minaurum's Senior Geologist & Director David M. Jones (credited with the discovery of the Los Filos deposit) and Stephen Maynard, Minaurum's VP Exploration and is expected to commence in June.

Vuelcos del Destino ("Vuelcos") represents the last large undrilled intrusive complex in the GGB. Intrusive rocks at Vuelcos consist of biotite and quartz-rich granodiorite porphyries, the same rocks that are associated with gold mineralization at Goldcorp's Los Filos project and Torex Gold's Morelos project. At Vuelcos these intrusions are found in a large central complex, 4 x 3 kms in size, and four peripheral areas that will be tested during a first round of drilling. The prospective area is similar in size to the original Teck-Minera Nukay joint venture which yielded the nearby Los Filos deposit. Drill testing will focus on the margins of the stock where strong calcite stockwork veining, iron oxides, and clay alteration are extensively distributed at the surface

"We look forward to getting underway with drilling at Vuelcos where we have identified many of the same classic geologic features as those found at the known gold deposits in the belt. Vuelcos represents a large-scale and previously untested exploration opportunity," stated David Jones, Senior Geologist & Director of Minaurum Gold.

Detailed mapping, sampling, and geophysical work conducted at Vuelcos led to the recognition of the potential of the area (see News Release dated January 12, 2012) based on the coincidence of alteration (clay, hypogene oxides, jasperoid, and hornfels), pathfinder element anomalies (e.g. As, Au, Bi, Sb), and VTEM anomalies (see Minaurum Gold Photo Gallery for Technical Maps).

Minaurum Gold is a gold-copper explorer focused on its Vuelcos del Destino project in the Guerrero Gold Belt, Mexico. For more information, please visit our website at [www.minaurum.com](http://www.minaurum.com) and our YouTube Minaurum Video Channel.

ON BEHALF OF THE BOARD

Darrell A. Rader

President and CEO
