

Vancouver, British Columbia--(Newsfile Corp. - May 6, 2015) - [Discovery Harbour Resources Corp.](#) (TSXV: DHR) ("DHR" or the "Company") is pleased to announce that it has contracted a detailed geophysical survey at its 100% owned 2BAR Project in Nevada.

The survey is termed an I.P. (induced polarization) survey and is designed to follow the mineralization discovered in the Upper Zone at 2BAR through drilling last November, as described in the Company's press release of January 26, 2015.

The copper mineralization that is present in outcrop and proven through drilling, continues under cover along the contact zone between the younger Tertiary felsic volcanics and the older Jurassic mafic volcanics. The mineralization, and the type of host rock containing it, should both respond well to this type of survey. This survey should also map fault structures in the subsurface. These faults are an important feature in focussing the copper mineralization in outcrop and as logged from drilling within the contact zone.

This survey is scheduled to begin during the week of May 15th. The results from this survey will be used in the location of drill holes for the program that is presently planned for early summer this year. KLM Geoscience of Las Vegas, Nevada will be conducting the survey. Data collected from the survey will be interpreted by Zonge Engineering's chief geophysicist.

Michael J. Senn, a licensed professional geologist, is the Qualified Person for Discovery Harbour Resources as described in National Instrument 43-101 and has reviewed and approved the technical contents of this release.

For further information, contact Kieran Magee by telephone at (778) 945-2958 or by email at Kieran@discoveryharbour.com.

ON BEHALF OF THE BOARD OF DISCOVERY HARBOUR RESOURCES CORP.
