Vancouver, British Columbia--(Newsfile Corp. - May 20, 2015) - Discovery Harbour Resources Corp. (TSXV: DHR) ("DHR" or the "Company") is pleased to announce that it has contracted a drilling program at its 100% owned 2BAR Project in Nevada.

This program has been designed to further test the continuity of the oxide copper mineralization occurring in outcrop and encountered during the Company's drilling program in November, 2014. That program was fully described in a press release on January 26, 2015.

The program is modest at 1,500 to 2,000 feet and scheduled to begin on June 7th. The Company anticipates this program to last two to three weeks.

Drill site locations are presently being selected, based on geology from mapping, previous drilling and from the results of ground geophysics. The objective of this phase is to confirm that thicknesses and grades of copper that were encountered during the November program, continue under the younger Tertiary cover for distances up to 400 feet from drill holes 2B14-05, 2B14-06 and 2B14-07. Confirmation of this objective will indicate that lateral continuity of mineralization does exist at 2BAR.

Marcus & Marcus Drilling, based in Idaho, will be performing the operations for the Company. DHR Qualified Persons will be maintaining a secure chain-of-custody of all core and samples. These will ultimately be delivered to ALS Global in Reno, Nevada for analysis and storage.

Michael J. Senn, a licensed professional geologist, is the Qualified Person for Discovery Harbour Resources as described in National Instrument 43-101 and has reviewed and approved the technical contents of this release.

For further information, contact Kieran Magee by telephone at (778) 945-2958 or by email at Kieran@discoveryharbour.com.

ON BEHALF OF THE BOARD OF DISCOVERY HARBOUR RESOURCES CORP.
