

Elko, Nevada (FSCwire) - [Lithium Corp.](#) [OTCQB:LTUM] is pleased to announce that it has recently received approval for the Notice of Work (NOW) it submitted earlier this year to the government of British Columbia in order to trench, map and sample the Weather Station showing at its BC Sugar flake graphite prospect in BC, where the Company conducted geophysical studies this spring.

Disseminated Flake graphite mineralization exists here over a considerable stratigraphic width, along with hydrothermal vein type graphite mineralization. The sporadic nature of outcrop exposure has precluded sampling the zone in its entirety to determine its full economic potential. The trenching program as originally planned is coincident with a strong electro-magnetic geophysical anomaly, and will extend along an existing trail for 524 feet (160 meters).

The Company intends to commence trenching sometime this fall, after the fire hazard in the general area has subsided considerably.

Company President Brian Goss states: "I look forward to the geologic and geochemical data this trenching program will generate. The shallow sub-surface test should result in a continuous detailed dataset that is very similar to a drill hole for a fraction of the cost. A positive result will add confidence and advance our property another step closer to a drill ready stage of exploration."

About Lithium Corporation

[Lithium Corp.](#) is an exploration company based in Nevada devoted to the exploration for energy storage related resources throughout North America, looking to capitalize on opportunities within the ever expanding next generation battery markets. The Company maintains a strategic alliance with Altura Mining, an ASX listed natural resource development company that is currently searching for off-take contracts for its 100% owned world-class Pilgangoora lithium pegmatite property in Western Australia.

Notice Regarding Forward-Looking Statements

This current report contains "forward-looking statements," as that term is defined in Section 27A of the United States Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934. Statements in this press release which are not purely historical are forward-looking statements and include any statements regarding beliefs, plans, expectations or intentions regarding the future.

Actual results could differ from those projected in any forward-looking statements due to numerous factors. Such factors include, among others, the inherent uncertainties associated with mineral exploration and difficulties associated with obtaining financing on acceptable terms. We are not in control of minerals prices and these could vary to make development uneconomic. These forward-looking statements are made as of the date of this news release, and we assume no obligation to update the forward-looking statements, or to update the reasons why actual results could differ from those projected in the forward-looking statements. Although we believe that the beliefs, plans, expectations and intentions contained in this press release are reasonable, there can be no assurance that such beliefs, plans, expectations or intentions will prove to be accurate. Investors should consult all of the information set forth herein and should also refer to the risk factors disclosure outlined in our most recent annual report for our last fiscal year, our quarterly reports, and other periodic reports filed from time-to-time with the Securities and Exchange Commission.
