

Vancouver, BC / TheNewswire / September 8 2015 - CARDIFF ENERGY CORP. (the "Company") (TSX-V: "CRS", Frankfurt: "C2Z.F", US Pinksheets: "CRRDF") is pleased to provide an update on the status of the Clayton #1H located in Runnels County, Texas. On August 10, 2015 the Company announced that it has been determined with consultation from Martin Energies, operator of the Clayton #1H well that the current drill contractor should be replaced due to performance issues. During drilling of the Clayton #1H the initial drilling contractor ran into a major problem when they managed to get the reamer stuck at roughly 2500ft when reaming the hole in preparation for setting casing.

On August 19, 2015 the services of a new drilling contractor and crew were engaged and work began to remedy problems at the well site. Significant efforts were spent preparing the hole to free the stuck reamer and the Company is pleased to announce that on September 4, 2015 the reamer was successfully fished out of the hole. The Clayton #1H is now being re-conditioned to depth in preparation for setting casing, after which 5 days of horizontal drilling will take place to complete the drilling of the well.

Jack Bal, President and CEO of Cardiff Energy Corp., states "we are very pleased that the stuck reamer has been pulled out of the hole, as a stuck reamer posed a major technical problem to completing the well. We are now confident that the Clayton #1H will be completed in the near term. We would also like to thank the new drilling contractor and crew who arrived August 19, 2015 and have done an amazing job and have shown the utmost level of professionalism."

The Company would also like to announce the addition of Greg Campbell to the board of directors. Mr. Campbell is currently the Corporate Secretary.
