About Select Sands Corp.

Select Sands' Sandtown property, located in northeast Arkansas, USA, is underlain by the Ordovician St. Peter sandstone formation, which is a major source of 'Ottawa White' Tier-1 frac sand/industrial sand selling into major US oil and gas basins as well as industrial and speciality end markets. The Sandtown property is located 3.1 miles from Highway 167 near a natural gas pipeline. The property has an active power line on the property and is located approximately 14.7 miles from the nearest rail system (see December 4, 2014 News Release). Compared to competitive sand mines located in Wisconsin owned by the largest US frac sand producers, Sandtown has a competitive location advantage as it is approximately 650 rail miles closer to the Texas/Louisiana oil/gas plays as well as the Houston port and industrial hub.

As per recently completed report by Tetra Tech of Golden, Colorado, USA and Vancouver, BC, Canada, 40% of the Sandtown property contains 22 million tons of Indicated resources of silica sand with a pre-tax NPV valued at US \$160 million (See June 10, 2015 News Release). The Company also owns high-grade gold deposits in the La Ronge Gold Belt, northern Saskatchewan.

Cameron Bartsch, M.Sc., P.Geo., of Tetra Tech, a Qualified Person as defined by National Instrument 43-101, has reviewed the scientific and technical information disclosed in this News Release.
